

# POPULAR Computing WEEKLY

35p 15-21 December 1983 Vol 2 No 50

## This Week

### Games designers

Graham Taylor looks at three different games designers — programs which enable you to write your own arcade and adventure games. See page 18.

### Commodore 64

Czes Kosniowski explains how trigonometry functions can be used for different programming techniques on page 30.

### Valhalla

Graham Taylor talks to John Peel of Legend about the making of Valhalla. See page 16.

### New releases

All the latest software games including *Jumbly* from DK Tronics. See page 80.

**★ STAR**  
Abandon Earth  
on Vic20. See  
page 10.

## News Desk

### Oric 2 gets go-ahead

FOLLOWING its take-over by Edenspring Investments, Oric has put back plans for an IBM PC compatible micro.

Instead, the company will go ahead with development of a new home computer — the Oric 2 — that will compete with the Electron and Commodore 64 machines.

The Oric 2 will be broadly similar to the first Oric machine. It will run the same form of Basic in an improved Oric Rom containing some extra commands including *Verify* and *Merge*. According to Tansoft's Paul Kaufman, though, "All the existing Tansoft software will work with the new machine."

With 64K Ram, the Oric 2 will have more memory than the Oric 1. Most of the additional memory will be used as video Ram. The computer will also feature a full-size full-travel keyboard and a completely new manual.

The Oric 2 is scheduled for launch in early March and will appear after the new Sinclair 'professional computer', now expected in late February.

### What future now for Atari?

THERE is increasing speculation that Warner Communications may sell its ailing Atari computer division.

This follows the recent purchase by Australian publisher Rupert Murdoch of 6.7 percent of Warner Communications. Murdoch paid \$98m for 4.4m shares, making it Warner's largest single shareholder.

The most likely attraction of Warner Communications is its extensive film library and 50 percent share in Warner Amex Cable Communications. Murdoch is already heavily involved in cable and satellite communications with News America, Skyband and Satellite Television UK, and the Warner's film library would make a rich killing.

Warner Com- Publisher Rupert Murdoch

munications is in deep financial trouble, mainly brought about by its Atari computer division which has lost in excess of \$500m in the last nine months.

It is now considered possible that Murdoch may try to swap his shares for Warner Bros Pictures.

In the event of a Murdoch

### GIVE YOUR BBC MICRO SOME STICK!

Joystick utility is a very clever program that will allow you to use joysticks with most programs on your BBC Micro Computer.

★ Simple to use — just press the keys ★ Requires just one block of memory space ★ Relocatable in memory ★ Sensitivity of joysticks can be varied.

This is an invaluable program that will heighten your enjoyment of your Micro. It is very easy for the beginner to use, but also provides plenty of scope for the more experienced user.

JOYSTICK UTILITY — £5 INC. (DISC — COMPATIBLE)  
CHEQUES TO:

Clare Micro Supplies

Dept. PCW, 222 Towerfields Road, Winsted, Cheshire  
Tel: (06055) 51374

ZX SPECTRUM 48K, programmable joystick, Ferguson cassette recorder, loads of software tapes plus magazines, including YU 3D, Blind Alley, Swordfight and more worth over £400, sell £220. 75 Hindburn Close, Bessacarr, Doncaster.

SPECTRUM 48K (issues) all complete + Manic Minor, £100. Tel: Brighton 776933.

32K RAM PACK for AM issue one Sinclair Spectrum, £18. Tel: 051 625 8604.

## Classified

SPECTRUM 48K, plus ZX printer, five rolls of paper, compiler, magazines, Chess and three books, £150, will sell computer and printer for £125. Tel: Russell. 061-740 4756 (evenings).

FOR SALE! Spectrum software, 3D Tank, Orbiter, £3.50 each, Gulpman £3, Mined Out, Frenzy, Roman Empire, Escape, £2.50, Winged Avenger III, all good condition. R. A. Kidd, 20 Buckfast Close, Ipswich, Suffolk.

WANT A GREAT BYTE THIS XMAS. Spectrum software hall list price, Mad Martha's 1-2, Scrabble, Zoom, Zip-Zap and probably all others in this column. N.B. all originals. Phone Reading 697095.

# **FORTY NINER** the **ZX-81** **BREAKTHROUGH!** ONLY PROGRAM OF IT'S KIND IN THE WORLD!

**ZX-81 Resolution identical to the SPECTRUM  
without any additional hardware!!**

In 1849 the Great American Gold rush started. Almost everyone who could, sold up everything and dashed to the west coast to look for this precious metal – including YOU!

You must dig for those nuggets (1) – But watch out for the giant rats (2) They burrow through the earth (3) to get into your tunnel. You can delay them for a while by knocking down a support (4) which causes a small cave-in (5) to block their way, but you can only destroy them by releasing a snake (6) from it's nest (7), when it heads straight for the surface, destroying everything in it's way.

All the time the Gremlin (8) is busy digging it's way through your waste earth pile (9) to reach the entrance to your mine. Once it does you have no

## **ACTUAL ZX-81 SCREEN DISPLAY**

escape!! – so you must stop it getting there by returning to the surface to replenish the main mound (9) with the smaller pile of earth which appears on the surface as you dig (10). The deeper you dig the more points you score –

but the further you have to go to replenish that mound! Once all nuggets have been collected, a cave opens (11) allowing you to pass through to the next stage – if you can reach it! This gives you more rats – but less snakes to destroy them with!!

### **Skill levels**

### How to submit articles

Articles which are submitted for publication should not be more than 3,000 words long. The articles, and any accompanying programs, should be original. It is breaking the law of copyright to copy programs out of other magazines and submit them here — so please do not be tempted.

All submissions should be typed and a double space should be left between each line. Please leave wide margins.

Programs should, whenever possible, be computer printed.

We cannot guarantee to return every submitted article or program, so please keep a copy. If you want to have your own program returned you must include a stamped, addressed envelope.

### Accuracy

*Popular Computing Weekly* cannot accept any responsibility for any errors in programs we publish, although we will always try our best to make sure programs work.

## Editorial

Newspaper magnate Rupert Murdoch has spent nearly \$100m in acquiring a 6.7 percent share of Warner Communications. This makes Mr Murdoch, in the form of his News Corporation, the largest single shareholder in Warner.

This information is of more than esoteric interest because Warner numbers Atari among its subsidiaries. Atari, once the jewel in Warner's crown, has lost more than \$536m so far this year.

Both Warner and Rupert Murdoch would appear to be anxious to rid themselves of Atari as soon as possible. Warner can hardly continue to absorb losses on such a massive scale, while Murdoch's interest lies in Warner's film and tv operations. Atari has suddenly become persona non grata in a very big way.

However, while Warner and Murdoch might wish to offload Atari, who would want to buy it? Given the current state of the micro market, it is extremely unlikely that anyone will be able to turn Atari round and start making a profit — at least not in the short-term.

US companies, aware of the problems that have beset Texas, Mattel, Osborne and other micro firms, are unlikely to see any advantage in buying Atari. But European companies might see Atari as a useful entry to the American market, which is potentially the most profitable in the world.

## Next Thursday

Can you guide Santa up and down chimneys and ladders in time to deposit all his presents? Find out in next week's star game for the Spectrum.

## BLASTERMIND! ★

At first glance this might seem to be just another version of a very popular game. How wrong can you be!!! True, the start is simple enough. The Spectrum picks a code of numbers or colours with a selection of levels of difficulty — and invites you to do the same. You then take it in turns to guess each others code from the clue supplied after each guess. An extremely well written, fast and very clearly displayed game, with almost inevitable defeat. This was exactly as intended but unfortunately something went wrong. During the programming strange complimentary messages began to appear on the screen. At first they were so few they were not taken too seriously, but soon they could no longer be ignored. Somehow the Spectrum had been given a personality — a rather deviant, supercilious, dislikeable, hateful, horrible mind.

SPECTRUM 48k £5.50

Side B contains a version of the game compatible with the excellent Currah µSpeech unit — even worse!!

## The Quest of Merravid ★

VIC 20 (16k) £7.95 or Commodore 64 £7.95

A really challenging and enjoyable adventure, written by a confirmed adventure addict who grew tired of the ease with which he solved other adventures himself. Will accept and act on sentences containing up to nine words.

The adventurer becomes Merravid, charged with the task of finding, taking and then returning the magic Firestone of the Dwarves. However, overcoming the many novel and original hazards is no easy matter. Careful and imaginative thought is required if progress is to be made and the Firestone tracked down to the lair of the Dragon of Thargon. Even then the Dragon has to be defeated and the stone retrieved. A compulsive, extremely enjoyable and very user friendly adventure.

## ★ COMPUTER MODERATED BOARD GAMES

The original and completely unique two player games of cunning and strategy, strictly for more demanding games enthusiasts.

- ★ **CONFLICT** — a full scale military and economic battle demanding clear thought and decisive action.
- ★ **GALAXY CONFLICT** — a complex battle for control of the Universe.

Each game:—  
ZX81 (16k) and SPECTRUM (48k) £11.95  
BBC 'B', CBM-64, ATARI 800 £14.75

Attractively boxed containing cassette, full size board, pieces, maps, and full instructions.

**Ideal Christmas Gifts!**

Most games available from leading retail outlets.

Prices include VAT, Post and Packing

Mail order to: MARTECH HOUSE, BAY TERRACE, PEVENSEY BAY, EAST SUSSEX BN24 6EE  
Telephone: (0323) 768456 Telex: 87465 EXIM Brighton

## His master's voice sounds from Commodore

COMMODORE will launch its long-awaited *Magic Voice* speech synthesiser unit in January, priced around £50.

The small hardware add-on plugs into the expansion port on the Commodore 64. Software held in Rom inside the unit gives it a vocabulary of 234 words and letters which, with the exception of Z (Zee), are pronounced in an acceptable mid-Atlantic accent.

As well as the complete alphabet and the numbers 1 to 12 a selection of phonetic sounds are included to enable new words to be built up.

The unit is controlled from Basic with the simple command Say "X".

A number of 'speaking'

Rom cartridge programs are planned to accompany the Magic Voice. These plug into a cartridge port on the top of the unit. Among these are the *Magic Garden* and *Magic Toolbox* educational series of talking books from Edata, the *BJ Bear* educational programs, two arcade games *Wizard of Wor* and *Gorf* and *Magic Desk 2*.

## Dragon 'poke' runs into problems

DRAGON software houses selling programs which use the so-called 'speed-up Poke' are running into problems of software incompatibility.

In earlier versions of the Dragon 32, the command *Poke 65495,0* (Hex: HFFD7,0) can be used to increase the operating speed of the Dragon's 6809E processor. A number of software houses have taken advantage of this fact to make their games run faster.

The problem is that around 20 percent of Dragons now

being produced will not accept the speed-up *Poke* command and therefore the games will not run. Among the programs affected are Beyond Software's *Up Periscope* and C-Tech's *Flight Simulation*.

The Dragon's 6809E processor is rated at a maximum operating clock speed of 1MHz and runs in normal use at 0.98MHz. The speed-up *Poke* increases the clock rate to 1.8MHz. It then depends on the tolerance of individual chips whether a particular machine will accept the *Poke* command.

One company which has found a solution to the problem is Microdeal. Its programs offer a menu choice at the start of each game where the Dragon owner can choose to play a version either with or without the speed-up *Poke*, depending on whether or not the Dragon concerned will accept it.

Dragon's Cathy Hyde says: "We do not recommend that Dragon users use the *Poke* because we cannot tell what long-term harm it will cause the machine. It is not just the Dragon's processor which has been designed to run at 1MHz, but the whole design of the computer. The peripheral interface adaptor which communicates with the keyboard and parts of the Ram have also been designed to work best at less than 1MHz."

## Paintings by numbers

KOALA Painter, from Audiogenic, is a graphics tablet for the Commodore 64. Consisting of a tablet and stylus, disc-based software and manual, it enables users to draw directly on to the screen.

There are facilities for selecting colour, creating mir-

ror images, copying one part of a picture to another and erasing mistakes. The user can choose between eight brush sizes and 16 colours.

Koala Painter costs £89.95 including VAT from Audiogenic, PO Box 88, Reading, Berks RG1 2SN.

## Little new at ZX fair

THE eleven and a half thousand visitors at the 9th ZX Microfair on December 3 and 4 found little new hardware or software on display.

Apart from East London Robotics' demonstration of its revolutionary new Trick-Stick Spectrum joystick, interest once again centred around new Spectrum software.

Richard Shepherd showed a new adventure by Invincible Island author Peter Cooke - *Urban Upstart*.

Silversoft, which has been rather quiet in recent months, had three new titles - *Freeze*, *Bees*, *Robot Riot* and *Sam Spade*.

Microsphere displayed a new 48K game, *Wheelie*.

Adventure house Phipps Associates launched its first arcade titles - *House of the Living Dead*, *Killer Knight*, and *Loony Zoo*.

And Gilsoft offered a new adventure written using its games-designer program *The Quill* - *Magic Castle*.

One trend that is very noticeable with recent shows is that increasingly the Microfairs are becoming dominated by retail exhibitors. More and more software shops are attending, with fewer and fewer of the software houses choosing to show.

## Rotten apples

APPLE, continuing its fight against counterfeit 'rotten' Apples, last week failed in an attempt to ban the sale of Taiwanese-made copies of its Apple II in Australia.

An Australian court ruled that the two machines - the Apple II and The Wombat - were clearly distinguishable by their names and that the Wombat distributor was not guilty of misrepresentation.

## US Viking for Dragon

DRAGON has continued to follow its American software path with the launch of seven Dragon 32 titles, all previously available in the US for the Tandy Color Computer.

The licences have been agreed by Dragon with a number of US Tandy houses —

Softlaw Corporation (Cimecon Moon), Computerware (Bloe Head and Synter 7), Prickly Pear (Viking, Shaft and Tee Off) and Spectral Associates (Whirlybird Run).

"We have had to go to the States because the 6809 chip, around which the Dragon is

based, has been rather neglected in the UK. Good software in this country is either written for the Z80 or 6502 processor," commented Dragon's Clive Johnson.

Pricing of the new titles in relation to the level of royalty payment Dragon has agreed for the titles. Whirlybird Run from Spectral Associates costs as much as £12.95 for a single cassette title.

"It is difficult to get in contact with good individual writers and by going in established US software houses we can tap into their authors," said Clive.

At present there are no plans for any of the American companies to write material specially for the Dragon: "It wouldn't be worth their while, when they can write for both the Dragon and Tandy machines at once," he added.

## Byting back

MICRO Format is offering a useful new type of add-on — the Byte Bat.

The 17 inch-long foam rubber baseball bat is ideal for those occasions when you just cannot stand it any more — and wish to take out your programming frustrations on your micro.

More details from Micro Format, 1271 West Dundee Road, Suite 16A, Buffalo Grove, Illinois 60090, USA. The Byte Bat costs \$9.95 (ab- out £7) excluding postage and packing.

## IBM contract

AB Electronics, manufacturer of Acorn's BBC and Electron micros, has won a multi-million pound contract to supply parts for the IBM Personal Computer.

IBM refused to disclose details of the contract, but AB admitted it was its biggest deal yet. Some indication of the size of the contract can be seen from AB's turnover — nearly £40m this year.

## Business and accounts

GEMINI has announced a range of software titles for serious micro users.

The five packages provide home business, accounting, and mail handling programs.

Combination Home Pack 1 contains Database, Home Accounts, Mailist, Spreadsheet Analysis and Graphplot for the Electron (on cassette) and BBC (on cassette, 40- or 80-track disc) machines priced at £79.95.

Combination Home Pack 2 contains Database, Home Accounts, Graphplot and Mailist for the 48K Spectrum (on cassette) priced at £59.95.

The other three titles are Combination Business Packs 1 to 3, the first two for the BBC machine and the last for the Electron, featuring more advanced versions of the programs in the Combination Home Packs.

From February 1, the complete range of business and utility programs will be available for the Commodore 64 computer.

Details from Gemini Marketing, 18a Littleham Road, Exmouth, Devon.

## Mattel shows no improvement

MATTEL, the US toy and video game giant, is continuing to show big losses.

Despite dropping its Aquarius microcomputer and announcing its intention to withdraw completely from the highly competitive home computer market, Mattel has recorded a substantial third quarter loss of \$46.3m. A healthy profit in its toy division was more than cancelled out by an \$82.4m. loss in its electronics and computer division.

## Teddy bear's picnic

AS Imagine's *Ah Diddums* and Audiogenic's *Teddy* show, bears are in vogue.

After Christmas, Artic programmer John Ritman — author of 3D Combat Zone — will continue the trend with *Bear Bover*, his new game for the 48K Spectrum.

As Ted the bear you must leave the security of your electric car and climb a series of ladders to drop down a new set

of batteries for it. In so doing it is important to avoid the bovver bears and their strange-looking pet.

John says: "It's a tactical arcade game. You can either run straight for the batteries and try to get through as many screens as you can or you can deliberately try to group the bears on a battery when you drop it — you get really high scores for that."

# SCREENPLAY

134 St. Vincent Street, Glasgow G2 5JU. Telephone 041-248 2481

**CHICKAROO:** A word recognition game for children. Find the missing letter in the name of this game which can be used by up to four players.

**PIRATES:** A childrens game based on word recognition. Identify the concealed word before you reach the end of the plank or else face the perils of the deep.  
A vocabulary of 100 words is supplied with both of these games, however, parents have the option of adding their own data files.

## BBC EDUCATIONAL

**MAD MONTY:** It's mealtime for MONTY the MAD python and frogs are on the menu! Guide him round the garden gulping frogs and munching magic mushrooms — beware those toadstools and if you keep your cool mouse may be on the menu.

**THE ANIMATOR:** The perfect DRAGON graphics tool allows you to define your own characters and then make them spring to life on the screen. The animated routine can then be saved on tape and combined with others to create your own games.

## DRAGON 32

**THE ILLUSTRATOR:** A graphics design package which can be used in a graphics Modes 1 or 2 to generate full colour illustrations on the screen of your micro. This package allows graphics and text to be mixed on screen and saved on tape for later use.

**MAD MONTY:** A fast and furious version of the snake in the garden game for the MODEL B BBC MICRO. Monty — the well known python — lives in a garden inhabited by juicy flowers. Help him munch his lunch but mind those rocks and walls!

## BBC GAMES AND UTILITIES

**MAD MONTY:** This version of the snake game has 7 screen layouts and five speeds from sublime to ridiculous. Monty munches frogs for lunch and is partial to the odd mouse for afters.

**COMING SOON:** Complete machine code toolkit for the 64. Assembler, Disassembler, Monitor, Hex dump.

## COMMODORE 64

## SCREENPLAY SOFTWARE MORE FUN THAN GAMES

Our range of software includes games but we believe that your micro should do more than test your reflexes. For example, **CHICKAROO** and **PIRATES** are educational products designed to help you extend your childrens' vocabulary.

**THE ILLUSTRATOR** turns your TV screen into an electronic canvas. The only limit is your imagination. **DRAGON** users are you bored with other people's games? Let **THE ANIMATOR** help you create your own.

## LIBERATE YOUR MICRO WITH SCREENPLAY SOFTWARE

## Storage solution

For those of us lucky enough to own a Sinclair Microdrive, there is the slight problem of the storage of cartridges which are about 1/8 the size of the ugly old tape cassettes.

My suggestion is to use the lid (the clear plastic half) of an empty cassette box. After all, we have plenty of spare tapes now we can store so much on a tiny cartridge.

Stand the cassette box lid on its edge to form a tray with a high back and stand your Microdrive cartridges in it. The lid will stand on a working surface or the back can be glued to the edge of a shelf. Leave the insert sheet in for an index record.

Yours, one of the chosen few.

Vic Phillips  
17 Elizabeth Avenue  
Ibstock  
Leicester

## Computer loonie

I would like to know if anyone could help out a poor old computer loonie. I want a Phoenix-type game for the Commodore 64 — it must have the full five screens.

Can anyone help before I crack up? Could you also let me know the company, etc. Help!

Mark Roebuck  
59 Ings Walk  
South Kirkby  
Pontefract  
W Yorkshire

I am afraid that I don't know of any Phoenix games for the Commodore 64, but I am sure they must exist. Perhaps our readers will be able to supply some details.

## Ace club

Re Phil Murray's letter of December 1. The Jupiter Ace Users Club is alive and well, has over 350 members, and is just about to issue its fourth newsletter. We welcome new members and suggest Phil writes to us. Subscription is £7 for 1984. Newsletters 1-4 cost an additional £7. Cheques payable "Rem-

soft". Here endeth the commercial.

Now that Jupiter have gone down the plughole, it's even more necessary for Ace users to stick together and share information.

By the way, the new Forth computer from Microkey is set for launch in January. It doesn't replace the Ace, merely complements it (128K, 3½" Sony drives, good keyboard, interfaces, etc.).

John Noyce  
Remsoft

18 George Street  
Brighton BN2 1RH

PS. Yes, I've met the theoretical ideal language types (re Jeremy Ruston's article). They're a pain. Forth is a lot more versatile than people give it credit. But even so, it's horses for courses.

## Microdrive problems

Andrew Pennell and friend are not the only people to have experienced difficulties with the new Sinclair Interface 1 and Microdrive. In my own case both worked perfectly, with no sign of any problems, until a month had passed. At that point I'd either get a syntax error when attempting to initiate a Microdrive Save or Load command into the computer directly or a 'Non-sense in Basic' message when trying from within a program.

Sinclair have now replaced my Interface 1 (no 12) with another issue 2 (no 422). Unfortunately, I haven't really been able to check whether this works correctly as last week my Spectrum gave up the ghost after I plugged in Interface 2!

What concerns me about the whole situation is that we Spectrum Issue 1 owners have waited over a year for the much promised Microdrive.

"Any truth in the rumours about Rupert Murdoch and Warner Communications?..."

Are we now to discover that the useful life of a Spectrum is only just longer than that period?

Ian Maule  
5 Beaconsfield Road  
New Malden  
Surrey KT3 3HY

## Rom omission

Thank you for forwarding Gareth Rowland's letter, as it highlighted an omission in my article in the 20-26 October issue on making Rom calls. There should be eight steps, not seven! If step 3.5 "STX >\$A6" is not included, the technique will not work. I apologise for the frustration this will have caused people. The eight steps should be as follows:

- 1) Create tokenised BASIC line.
- 2) LDX \$A6: PSHS X
- 3) LEAX \$LINEPTR, PC
- 4) STX \$A6: missing step
- 5) LDA X
- 6) ANDCC \$FFE
- 7) JSR 12345 (or whichever)
- 8) PULS X: STX \$A6

Peter Whittaker  
Cambridge

## Interrupt mistake

With regard to the use of interrupts on the Spectrum by Alan Went (PCW 24-30 November).

The general article was very interesting, but he made a basic mistake in assuming that during the interrupt acknowledge cycle the data bus would contain 255 decimal. Although the data received will normally be 255, this is not always true. The actual value can be any-

where between 0 and 255, the problem being that some add on units do not decode the Ioreq and Read lines correctly.

Also, there are no true pull up resistors on the data bus which rely on the pull up effect of the memory devices, etc., to ensure 255 — this cannot be guaranteed to work.

To ensure that the interrupt will respond as required, it is necessary for it to work no matter what value is returned. To do this, we must set aside 257 bytes for an interrupt vector table. Each byte of this table contains the same value such that no matter what value is added to the I register we always jump to the correct address (257 bytes are needed, as the first byte of the vector address could be at the 256th byte ie returns 255).

In my 48K Spectrum I use Feh (254 dec) as the value stored in the table. This means that the interrupt address is at Fefeh (65278 dec). The vector table is placed at address Fdooh to Feooh (64768 to 65024 dec).

The use of the I register at FDH does not cause any 'snow' on the screen, as this only happens between 40H and 7FH, the memory for the 16K Spectrum. But, this does cause problems for 16K owners who are unable to use this technique. The accompanying brief routine will set up the interrupt.

Anyway, thanks for an interesting magazine, keep up the good work.

FE69	ED56	OFF IN 1	turn off special
FE6B	09	RET	reset to orig mode (no need to reset I reg.)
FEFE			Interrupt routine starts here.

# Abandon Earth

**A new game for the unexpanded Vic20 by Mark Manns**

**A**s the last remaining computer on the remains of the planet Earth, after the great galactic battle of 2056 AD, it is your job to get the last remaining scientists (4) to the awaiting mother ship. But it's not as easy as it seems. Not only does the mother ship move from left to right across the top of the screen, but there are also asteroids, aliens and space mines to stop your progress.

This game for the unexpanded Vic20 loads in two parts. The first part contains the instructions and the data for the graphics. The second part contains the main program. (This game uses joystick.)

### Variables

TI — TIME  
SC — SCORE  
LI — LIVES  
COL — COLOUR  
RP — FIRE

BC — FIRE  
M — MOVE MOTHER SHIP

### Program notes

# HEWSON CONSULTANTS

## 4 SUPERB FLIGHT SIMULATORS

**NIGHTFLITE II**  
New all machine code version of our highly successful flight simulator. Now with perspective cockpit view, improved instruments, detailed map, four beacons and other enhancements. Multiple levels of play to develop your flying skills. Complete with printed flight brief at the end of your flight — signed by the program author. The most realistic simulator on the market. 16K or 48K Spectrum.

**£7.95**

**ALBO HEATHROW AIR TRAFFIC CONTROL**  
For the 16K Spectrum.  
**YOUR TASK:** Direct incoming aircraft from holding stacks to runway — smoothly, safely and expeditiously.  
**YOUR INSTRUMENTS:** Radar screen showing aircraft call signs, kilos and trails. Four stack displays giving altitude, heading, speed and size.

**£7.95**

**BBC NIGHTFLITE**  
Take the controls of your computer and fly by night over mountains to a safe landing. Take off, bank left and right, navigate between beacons, adjust the flaps and the rudder. A careful simulation of the deliberate operation of flying a plane. Unrealistic speeds and altitudes cannot occur because your plane will crash.  
BBC Model B

**£6.95**

**DRAGONFLY**  
Hi Res. Real time flight simulator. Two runways, take off, bank, adjust trim, navigate between beacons and land. Superb cockpit display with dials and readouts.  
Instruments: AH, ASI, VSI, AH, ILS, TS, RPM, GAS, TEMP, HDG, BCM, BRG, FLAP and GEAR. Simply the BEST flight simulator for the Dragon.

**£6.95**

**PILOT**  
Fly your ZX 81. Take off, climb, bank, adjust engine RPM. Navigate between beacons. Instruments include AH, ALT, HDG, FLAP, GEAR, VOR, VSI, WIND, DME, ADF and ILS.

**£5.95**

# TURN YOUR PROGRAMME UPSIDE DOWN

Now you can add another dimension to your games.  
Swap direction, swap functions, confuse your friends.  
In fact you can add almost any twist to your games with  
Stonechip's Programmable Joystick Interface.

You can also listen to them  
with Stonechip's Echo Amplifier.

**Programmable Joystick Interface.** This also enables any Spectrum software to be used with a joystick, irrespective of which keyboard keys have been chosen for function.

Programming is easy using only a single switch. Switch one way to program and another way to play. No tapes to load or links to worry about — all programming is achieved by hardware. Used with Atari-compatible joysticks. Simply plugs into rear expansion port of ZX-Spectrum. No other connections to make, no additional power supply required.

**Echo Amplifier.** How would you like to listen to the sound output from your ZX-Spectrum without ear strain? The Stonechip Echo amplifier can do this for you as well as easing the tedium of saving or loading of tapes and enlarging the range of tape recorder compatibility with the computer. The amplifier has volume control over a range adequate for most uses, and a tone control for harsh or mellow sounds. A switched interface removes the need to swap leads during 'SAVE'ing or 'LOAD'ing. Leads are left connected all the time and the desired function is selected on the three position switch by the user. Use of the 'CUE' facility enables an audio cue to precede the program being 'SAVE'd' on tape, a decided advantage when searching through a multi-program tape. The Echo simply plugs into the Ear, Mic and Power sockets of the computer and does not require an additional power supply. The expansion port at the rear of the computer is left free for use with other peripherals and the unit is housed in an attractive case custom designed to complement the ZX-Spectrum.

## New from **SUNSHINE** Master your ZX Microdrive

programs, machine code and  
networking by Andrew Pennell

Master your ZX Microdrive contains all the information you will ever need to use the ZX Microdrive to the full. Clearly explained, with many examples, it is equally suitable for the relative newcomer to BASIC through to the experienced machine code programmer.

Andrew Pennell has also included a database file handling program to let you put the ZX Microdrive to practical use with your Sinclair Spectrum.

Look out for the Sunshine range in W.H. Smith's, Boots, John Menzies, other leading retail chains and through our national network of book shops and specialist stores. Dealer Enquiries: 01-437 4343

# The legend continues

**Graham Taylor looks at the men behind Valhalla — a Norse legend brought to life**

**T**he date, Legend Software has released one game — a game that, depending on which chart you believe, has occupied one of the top five positions since the day of its release and looks set to remain there all Christmas and beyond. The game is *Valhalla*.

For a game which is doing so well, surprisingly little has been heard about the company. But, romantics who like stories of 12-year-old whizz kids are going to be disappointed. *Valhalla* is the end result of nearly nine months of coding by a team of seven, the majority of whom are very experienced programmers.

The almost military operation was supervised by managing director John Peel. "The idea that we should do an animated graphics adventure goes back nearly two years. It really is the first logical step on the way to an interactive movie — something indistinguishable from a real film, except that you are one of the characters."

"The idea of interactive movies is pretty dramatic. We wanted a name for the company that would imply something romantic and grandiose — the name Legend was no accident, we spent days ploughing through dictionaries."

*Valhalla* has graphics and characters loosely based on Norse myth. Backgrounds depict forests, castles, caves and lakes and the characters are dressed with helmets and armour — as is appropriate to the theme.

In fact, though, such details were not decided until a very late stage of development: "They are incidentals really. We had outlined several different plots and *Valhalla* happened to be first. Once the Movisoft operating system was functional, aspects like shapes of character and types of background were mere detail."

It's Movisoft that ensures that *Valhalla* will be no one off. "Timing for *Val II* is less a matter of coding and more a question of market timing. Once demand for *Valhalla* has calmed down a bit and is licking over

we'll issue it — I think we're looking at next spring."

Needless to say, *Val II* will not be called *Val II* but John would give away few details about it. "It won't be staggeringly different, but it will definitely be an improvement — we've learnt a lot from *Valhalla*."

John Peel has been involved in computer software for quite a while. He started Premier Publications, which later became Premier Microsystems — now familiar for a Dragon disc drive. He sold that company to set up another one familiar to Spectrum owners, Microl.

"Microl was an idea waiting for a computer. When the Spectrum was announced we were ready — the first product, *Use and Learn*, came out within days of the computer."

Microl was successful in an unspectacular way, and became the means of financing *Valhalla*. "The cost of *Valhalla* was at least £70,000 with all the development work and other outgoings. We were committed to selling a lot of programs to break even."

The company has already recouped its costs and more. "I'm afraid we have bought the obligatory black Turbo Porsche, but the rest will be ploughed back into other projects."

Legend will be licensing Movisoft to other companies. The hope is that it will become the adventure game equivalent of CP/M — so standard that many computer manufacturers will allow for its easy implementation on their new machines.

"What's important is the size of memory — 48K is more or less mandatory — but I don't anticipate many new machines having less than that."

"Movisoft is not really specific to the Spectrum's Z80 processor at all. We did it on that machine simply because we could and it has sold the most," adds John.

This is borne out by the fact that *Valhalla* will be issued on the Commodore 64 in

February: "The Commodore 64 version of the game will be similar to the Spectrum one, but obviously the graphics will be better. For one thing, the characters will be more than one colour and we should also be able to do more with the backgrounds."

The team responsible for *Valhalla* was Graham Asher, Richard Edwards,

Managing director John Peel

Charles Goodwin, James Learmont, Jan Ostler and John. Several of the team were ex-IBM employees. None of the team had ever played a computer adventure before starting on the project, although some were *Dungeons and Dragons* fans.

Jan Ostler was responsible for many of the overall themes and ideas and, particularly, the characterisation. "The first thing I did when work began in earnest was to buy every adventure game I could lay my hands on — I spent a fortune."

"I was amazed at the lack of professionalism — most of them were full of spelling mistakes and obvious bugs — the only exception was *The Hobbit*."

John agreed: "I was sufficiently impressed to have a technical analysis done on it — the gist of that was 'well yes, but we can do better'."

"If we have done better, I think it's down to working as a team, giving people different and separate responsibilities. It's really impossible to do a big project like this any other way — take the analogy with conventional movies, imagine one person being not only the cameraman and the director but also having to design his own camera."

The success of that design can be seen in the number of technical achievements in *Valhalla*. Two aspects are particularly interesting — the seeming independence of the characters and their ability to continue with what they are doing, not only as you watch, but even when you are typing in commands.

The character independence was achieved by a technique known in artificial intelligence circles as "fuzzy logic". This involves a deliberate smearing of fixed patterns, using random processes. Put simply, instead of saying "under condition X, Character Y will do Z", the situation is changed so that Y might not do Z under condition X although the character probably will.

"Actually it's nothing like as simple as sticking a random number from time to time. Rather, there are multiple levels of generators controlling the events, some are predictable, others are not — we control how they interact."

The way action and input can occur the same time — a technique known as concurrency — is less easy to explain.

Apparently, "the concurrency is achieved by using vectored interrupts in conjunction with registers and stack 'lookaside' copies," said John. Now you know.

In keeping with its name, Legend's plans for the future are dramatic and grandiose. "We're waiting for the hardware to a certain extent, to get the kind of graphics we want to do, we need a lot more memory."

"We're also interested in the idea of speech. Quite honestly, the only thing stopping anyone from having a speech unit with decent human-like speech is that no one has got round to designing a new chip — everyone is still using the Texas chip, that's why they all sound like Daleks."

Another area that interests Legend is speech recognition. "It's not that difficult to get a computer to recognise speech, but it's difficult to do it under normal conditions, ie, when everyone shouts at once."

Assuming these problems are solved, John is very enthusiastic about the outcome. "With plenty of memory, plus good speech, plus speech recognition, there is no reason why there should not be a program visually indistinguishable from a tv picture with characters whom you can speak to and who will answer back — the potential market is enormous."

John actually sees a day in which there will be something like a video library, with all sorts of different interactive movies on all sorts of themes which people hire for

the evening. "You could have just as many themes as normal videos — cowboys, horror, science fiction and so on."

"A whole new kind of artistic talent might develop — if we can make Movisoft simple enough to operate so that only a small amount of actual programming knowledge is necessary, then creative people could use the system to design plots and characters like a scriptwriter or a director."

So far as the future is concerned John doubts that many of the micros being launched now will survive. "There are some nice machines, but quite honestly I don't see how they are going to survive — in this country Sinclair and Commodore have got it sewn up — or at least they have

if they choose to play rough. I don't think we'll see more than three or four manufacturers survive in the next few years — then we'll see the kind of standardisation under which systems like Movisoft can flourish."

Some of the lessons learnt from *Vaihallia* will bear fruit in non-adventuring areas, says Jan. "There is no sensible reason why computers should be the province of males between 15 and 35, but people just haven't discovered how to write programs for women. We have something planned that will help to change that situation."

Legend are giving little away, but it seems such a project would involve some of the artificial intelligence techniques used in *Vaihallia* to an even more sophisticated degree.

Legend seems a peculiar mixture of daydreamers, who've proved their dreams are at least partly possible, and fairly hard-bitten realists playing close attention to the market and its requirements. It may be that this mixture was a vital part of the success of the project.

John Peel sums up *Vaihallia* in the following way: "I would call it a qualified success — certainly we've proved that a number of things are possible on a cheap home computer that everybody said were impossible. More than that, I think we've introduced the basic concept to people. Naturally there are a lot of things I would change about *Vaihallia*, things which could have been done better even on a Spectrum — wait until the next one."

## SOPHISTICATED GAMES FOR VIC20

**VIC CRICKET** Realistic game of skill and luck with all the major rules. Cricket  
 correctly interpreted. Full scorecard, printer and game save facilities. Needs 16K  
 expansion. £5.99.

**LEAGUE SOCCER** League championship game for two up to 22 teams/players.  
 Automatic fixtures. Ball action commentary, match facts. League tables, results check  
 postponed games, etc. Non league matches also playable. — the VIC will even make  
 the cup draw. Printer and game save. Needs 16K expansion. £5.99.

**WHODUNNIT?** Twelve guests have gathered for drinks at Murder Manor. However one  
 of them has more than drinks on his mind. Thinking detective game for one to six  
 players with genuinely different murder every time. You can even render the  
 suspect! Needs 8K expansion. £4.99.

**TOP OF THE POPS** Money making game about the music business. Make your own  
 records and see them climb the chart. Printer and game save facilities. Needs 8K  
 expansion. £4.99.

**VIC PARTY 4** Contains MASTERWORD, A DAY AT THE RACES, GAME X (Serp  
 Parker), and CONSEQUENCES. Four games ranging from the serious to the ridiculous.  
 All good fun — nothing offensive. Needs at least 3K expansion. £5.99.

## In the driving seat

**Graham Taylor looks at three games designers and compares the results**

Does the following pattern sound familiar? You buy a computer after months of planning and saving. For a while you play with it avidly, you even learn a reasonable amount of Basic programming. There follows a period of increasing disenchantment as you realise that your own programs are never likely to reach the standards of the top software houses — gradually your computer gets left on the shelf more and more, a sad, lonely sight.

What we all hope to get from having a computer is a kind of technological Lego — an endlessly changeable toy. The problem is that just buying commercial programs doesn't bring the satisfaction of creating them yourself.

If this does sound familiar, then now is the time to bring out your machine from the top shelf and dust it down. The fun may come back to computing — the games designers have arrived.

These packages allow you to create your own games, using various kinds of menus or special languages. The result is a far more professional game that is faster than anything written in Basic. The price you pay is some degree of restriction in the kinds of game you can create.

Although the packages reviewed here are predominantly Spectrum-based, you can expect to see similar programs being made available for other machines shortly.

To begin with though, *CoCo II*, a program for the Vic20 that's been around for quite a while, but hasn't been distributed

widely in this country.

You design your game in two distinct sections — *Player* and *Opponent*. Within each section you use a simple, Basic-like, language to determine the pattern of movement and the score values. Movement is by a minimum of four pixels at a time, which means that the end result is bound to be fairly jerky.

The language is easy to use: the eight points of the compass are assigned numbers, with one extra number for 'track', ie, for the opponent and player to follow one another. Movement is then a matter of a series of commands like *Move 1 5*, *Move 4*, 12 etc meaning SW for 5, 4 pixel units, then W for 12 units.

Shapes are designed using a simple user-defined graphics generator, operated by joystick — you just fire to turn a pixel on or off. The program comes with an extensive manual and one sample game which, unfortunately, doesn't really show the program off at its best.

The problem with *CoCo II* is that the end results are rather disappointing — they are not really very much better than you could do with only a limited knowledge of Basic — the only exception to this being the ease with which you can create shapes, but then there are plenty of programs around to help you do that for far less money.

In terms of the quality of the end result, *Games Designer* from Quicksilver is a far more impressive package. The program

comes with eight ready-made games, any of which might have been marketed successfully in its own right in the early days of Spectrum games.

The main reason for the quality of the games is the provision of a sprite generator within the program — independent graphic shapes whose movements can be individually defined. Sprite movement is smooth and fast and is the basis for most arcade machines. Using simple cursor controls any shape may be assigned, up to 32 sprites, as may any colour.

Any of four game formats can be selected — *Invaders*, *Defender*, *Asteroids* or *Beserk* type. The difference between the game lies in the screen layout and the position and manoeuvrability of the missile base/space ship; eg, *Invaders* format gives you a base at the bottom of the screen, with waves of aliens attacking from the top, and base movement limited to left and right. In *Asteroids* format, the spaceship is placed centre screen with the enemy swirling around it — the base can move in all directions.

Using a series of menu options, sounds can be assigned to shapes using a simple but effective sound generator. The movement and attack waves are selected — ie, how many aliens move where and at what time. Movement is almost infinitely variable and is programmed in a similar way to *CoCo* with numbers assigned to directions. A line display shows you the pattern of movement you are creating.

Other options on the menu allow for a star background and optional features like whether or not your ship has a shield. You may also select which, if any, of your waves of attackers are able to fire back at you.

One of the most impressive features of the *Games Designer* is the animation of the aliens. By designing two appropriate sprites, a menu option allows you to switch quickly between them — thus, space invaders can wave their arms threateningly, or spheres can appear to spin.

If you like fairly straightforward alien bashing, then *Games Designer* is for you — you really can create games as good as those available commercially, but to your own specifications. The only criticism I would make is that you really don't have much choice over the basic structure of each game, since you must adopt one of the four predetermined formats.

As proof that the idea of programs for creating games aren't limited to arcade-style games, Gilsoft have now released *The Quill* — a program for constructing text adventures.

To use *The Quill* properly requires some effort and some experience — it is abso-

lutely essential to go through the examples in the manual. But, although it requires the most effort, you get a tangible result, *The Quill* is perhaps the most satisfying of the programs mentioned.

The program again works by the use of menus. It is vital to plan out your adventure completely before you start — decide how many rooms there will be and where they will be in relation to one another; eg, bathroom west from bedroom, etc. You also need to decide what objects are located where and what conditions must be met to solve various obstacles, eg, the torch must be switched on before you go down to the cellar otherwise you fall and break your neck.

Using the menu, you enter the text associated with each room and the objects found there. The most difficult section is

the list of acceptable verbs, this includes not only those vital to the plot, eg, 'Kill vicious monster' but other inputs to which you want the game to respond with something other than "I don't understand..."

The crux of this input response is the use of flags — put simply these are on/off switches used to determine various courses of action; eg, you may decide that flag 1 is set on when someone picks up the screwdriver. Later on, opening a safe may depend on whether or not you have the screwdriver; ie, is the flag set or not? It's not difficult to use, but it does require logical thought, particularly if you want to create brain-teasing puzzles in the game.

For an adventure fan, possibly the only thing more satisfying than solving puzzles is creating your own and watching someone else trying to solve them — particularly when you can populate your adventure with people and places known to those likely to try and solve it. Gilsoft will even let you market your *Quill*-written adventure — they only ask for a mention. *Quill* supplies the programming (in machine code), all you have to provide is some thought, planning and perseverance.

Despite the odd reservation, all these packages can be recommended. They might breathe new life into your micro, merely by putting you back in the driving seat and letting you find out what you can do.

**NOW YOU CAN LIFT STATIC DRAWINGS, PHOTOGRAPHS, ETC RIGHT OFF THE PAPER AND BRING THEM TO LIFE INTO YOUR PROGRAM!**

FROM PAPER TO SCREEN...  
...AND INTO YOUR PROGRAM.

# POWER GRAPHICS

**ACTION-TRACER** + **GHOST-WRITER**  
LARGE-TRANSFER SYSTEM PROGRAM COMPILER

**TWO POTENT FEATURES COMBINE TO BRING YOU UNIQUE NEW POWER OVER YOUR SPECTRUM GRAPHICS!**

● **ACTION-TRACER** Gives you the power to transfer drawings, photographs, paintings, lettering - in fact ANY paper-based images into full colour time drawings on your Spectrum screen, with astonishing ease and an accuracy that rivals expensive digital tracers. But this time you get more than just a static on-screen design that has to be laboriously drawn on and off tape, because...

● **GHOST-WRITER** Interprets your on-screen design into the precise sequence of Basic instructions needed to EXACTLY reproduce it, and then writes the program for you, directly into memory! New program lines appear in your listing which are indistinguishable from ones you might have written yourself. When you're finished, POWER-Graphics will 'self-destruct', leaving behind only your new program lines ready to use.

● **TOGETHER THEY'RE DYNAMIC!** The new program captures your design DYNAMICALLY, giving you instantly the power to MOVE it anywhere, to SHRINK it down to a single pixel, or EXPAND it to fill the screen. You can SQUEEZE or STRETCH it into weird distortions, flip it UPSIDE DOWN or MIRROR-IMAGE it, ROTATE it in the plane of the screen... in other words MANIPULATE it UNDER YOUR FULL CONTROL!

Once GHOST-WRITER has captured Space-Shuttle, you can immediately reproduce it anywhere, any size, AND redesign it too!

No problem producing mirror-images and turning them upside-down in just as easy, too!

Drawing a simple cross-section (above left) and rotating it through the plane of the screen to produce exotic architecture is just a snap into a whole new world of exciting, inventive graphics made easy as ABC by GHOST-WRITER's versatile programming.

## ANIMATION OR MANIPULATION — IT'S ALL THE SAME TO POWER-GRAPHICS

Switching individual parts of a design is easy, and thanks to POWER-GRAPHICS' ability to produce high-speed curves, which DRAW as fast as straight, even curved shapes can be animated in real-time — like the lips of this well-known newscaster (recognise her?)

**IF YOU WANT PICTURES YOU CAN USE, IT HAS TO BE**

FUN TO USE, SIMPLE IN OPERATION, POWER-GRAPHICS IS AN IMPORTANT NEW TOOL FOR BEGINNERS AND ADVANCED USERS ALIKE, AND EXTENDS THE SPECTRUM'S POTENTIAL INTO EXCITING NEW REGIONS.

**NO EXTRA HARDWARE NEEDED! ALL YOU NEED IS...**

**POWER  
GRAPHICS**

**ZX SPECTRUM  
FOR 16K OR 48K  
ONLY £8.95**

## SHEER MAGIC!

THE POWER TO PRODUCE STUNNING TOP-QUALITY TEXT DISPLAYS FOR IMPRESSIVE PROGRAM OR VIDEO TITLES, OR ADVERTS, LETTERHEADS, ETC.

**LOOK HOW EASY IT IS:**

- \* 4 movement-keys let you SET the 'Magic Window' to ANY rectangular shape and size, then MOVE it to any screen position.
- \* ANY LINE OF TEXT NOW ENTERED WILL BE PRINTED TO EXACTLY FILL THE SHAPE USING CURRENT COLOUR AND ATTRIBUTE SETTINGS.
- \* SETTINGS are always on display below the screen. Change and test-view your text in new colours etc. in SECONDS!
- \* PAINTER'S CURSOR will 'paint-in' detail effects, sketch with any character, or position lines of normal text.
- \* PRE-SET UDG's let you produce shimmer-effect borders, panels, etc. in new colours such as orange, pink, purple, etc. etc.

- \* LABEL command prints standard cassette label shapes, ready for you to add text. Prints out true-to-scale on ZX printer
- \* BANNER-WRITER MODE prints text sideways on ZX printer in the form of a huge banner, the height of each letter being full paper width.

**SPECTRUM TYPESETTER 16/48K £4.99**

### GRAFFIX

Commanded graphics are ultra-easy. Totally user-friendly. Customises your display of multi-functions. Whatever you think you might want, this programme is it of a type! PRODUCES UDGs THAT SCREENS WILL RECOGNISE!! Sheer convenience for only

**£3.99**

## SOUNDS FANTASTIC!

Superb sound effects from your Spectrum have never been so easy!

- \* YOU conjure up your own unique sound-designs on the graphic synthesizer control panel.
- \* AUTO-SONICS will instantly turn them into automatically compiled Basic program lines that will reproduce each sound again and again IN YOUR PROGRAM!
- \* 26 built-in effects include animals, engines, siren, phone, Monster growl, space sounds, etc. etc. etc.

Just the job... the effects are excellent! Personal Comp. World

**WINNER OF PCW "WHIZZ-KID" '82**

... a very powerful program... the ease of use makes it so simple to alter and amend the sound... Well done BUTTERCRAFT... this is an excellent programming tool! (Educational Computing Dec. 82)

## SPECTRUM AUTO-SONICS

**SOUND EFFECTS**

26 superb sound effects, including: Animals, Engines, Siren, Phone, Monster Growl, Space Sounds, etc. etc. etc.

PLUS: 26 pre-set 'application' sound panels that you can use for your program.

**VALHALLA**

# One hundred and eighty

Andy Wilson concludes his series on structured programming for the ZX81

Last week we looked at assembly language. I now hope to give a few more tips on using the routines.

As the procedures must be defined before they are called it is best to have the procedure definitions at the beginning of the program. Alternatively, you could throw your scruples to the wind and use a *Gosub*, with the definitions at the end of the program.

Procedures can be called from within other procedures, or even iteratively; i.e. a procedure can call itself, but keep one eye on the procedure stack!

One of the shortcomings of the routines is that parameters cannot be passed to and from procedures. We can, however, simulate this facility in the same way we might when using *Gosubs*, eg:

```
500 LET X = Y
510 LET XFACTORIAL = X CALLPROC
520 LET Y = X
```

With an appropriate procedure *XFactorial* this will work out the factorial of *X*, or any other variable we may wish to use.

Listing 7 is an example of a full program written using the routines. It is supposed to simulate the electronic darts scoreboards often seen in pubs. It has the advantage that the score of each dart can be entered individually, with a constant display of the running scores, and the current thrower's round score and score needed to finish.

You will, I hope, notice the total absence of the dreaded *Gotos* and *Gosubs*. You will also, in all probability, notice the lack of the explanatory REMs whose virtues I extolled

earlier. This is a deliberate move intended to show how easy it can be to follow the gist of a reasonably structured program.

Although I have not used REMs to actually explain the program, I have used them to help clarify the structure. REMs followed by a line or more of spaces are used to separate parts of the program, while REMs followed by graphic shifted 7s are used to underline procedure names.

The program was written 'top down': that is the outline of what procedures would be needed, and how they would relate to each other, was decided before any actual code was written. Naturally this outline has often changed by the time a program is complete, but this method still helps make it easier to understand. You should get a rough idea of how the program works simply by looking at the procedure names and where they are called.

Nevertheless, I expect some explanation of the program would not go amiss. If you intend to type in the program I suggest you do so first, after Loading the machine code of course, then Run it. This should make things much clearer.

I will give a brief explanation of each procedure, in reverse order, starting with: *Intro*: I hope you can guess what this does. Called by the main program.

*Scrollup*: as the name suggests scrolls the screen up one line, keeping the current print line the same. The top line, T\$, is reprinted so we don't lose it. Note the *Print* after *Scroll* to avoid upsetting the

display. Called by *Play*.

*Dartin*: checks the score entered is, in fact, a possible dart throw, and sees if it is a double or treble. Called by *Scorein*.

*Scorein*: inputs the score and converts it from a string to an integer. Called by *Round*.

*Round*: gives a player three throws, adds each dart to the round score and takes it away from the score needed to win. It then makes sure the player hasn't 'bust'. Called by *Play*.

*Play*: firstly looks at the print line to see if the screen needs scrolling. It then plays a *Round* for each player. If the player hasn't bust it updates the score and prints the new one. Called by the main program.

*Win*: if a player's running score is 0 and his/her last dart was a double or a bull we call *Win*. A polite message is printed, a note is taken of who won, *I* is set to 2 in order to leave the *For* loop, and the *Won* flag is set. Called by *Round*.

*Main Program*: starts by calling the *Introduction* and setting up two strings for the headings and spaces. The rest of the program is repeated until the reply to the "Play Again?" prompt is not 'Y'. After initialising the variables and the screen we keep *Playing* until the *Won* flag is set.

Presuming you know how to play darts that should have been quite easy to follow. I hope you have found these articles interesting and maybe even useful. If you were looking for tips on saving memory or speeding up your games you have read the wrong articles, but if you've got this far you must have got something from them, and any comments or even criticisms, constructive of course, would be very welcome.

## PROGRAMMING AIDS AND LANGUAGES FROM ...

# Audiogenic

### FOR COMMODORE VIC-20 AND 64

**VP052 BUTI PLUS - £39.95** - Basic Programming Aid Commands PLUS Machine Code Monitor PLUS 3K Expansion! Basic aids include APPEND, AUTO, DELETE, DUMP, EDIT, FIND, HELP, RENUMBER, REPEAT, STEP, TRACE, UNNEW, VIC and DEC to HEX. Monitor Commands - ASSEMBLE, DISASSEMBLE, CENTRONICS, FILL, GO, MEMORY, HUNT, REGISTER, PRINTED DISASSEMBLE, LOAD, QUICK EXECUTE, WALK CODE, SAVE, TRANSFER, EXIT.

**VP074 MONITOR VIC - £39.95** - Monitor on its own. Commands as above.

**SE074 MONITOR 64 - £29.95** - 64 version. Commands as above.

**VP078 MIKRO ASSEMBLER - £48.95** - Cartridge Assembler program for the VIC. Includes 3K extra memory. Write your machine language source code on Basic Lines which can be manipulated using the included toolkit commands. MIKRO uses standard MOS mnemonics, and features ASSEMBLER and DISASSEMBLER, plus TIM monitor commands, and special hi-res, sound, and joystick extensions.

**SE076 FORTH 64 - £29.95** - Audiogenic Forth is very fast because it compiles right down to machine code, and very compact because it uses special screen compression routines. Audiogenic Forth contains a dictionary of over 200 Forth words, but the great thing about Forth is that you can define your own commands! Audiogenic Forth gives you full error messages (instead of codes), a full scrolling screen editor, and a comprehensive manual.

**VP076 FORTH VIC - £34.95** - As above, but includes special VIC colour and sound commands. This version must be used in a motherboard with 8K+ expansion.

**VP076/M FORTH VIC (with memory) - £39.95**

As VP076, but includes 3K expansion built-in so that you don't need a motherboard and expansion.

# One page at a time

*Richard Walton presents a modified print routine for listing programs*

The Dragon List routine is inconvenient if a long program is to be edited. Although *Shift @* can be used to stop the listing any time, an automatic "paging" of the listing is much more convenient.

The accompanying program provides such a facility. It does this by intercepting the Dragon's normal routine.

An assembler listing is provided to show how the routine works. In addition, a Basic program is given for users who do not

have an assembler.

The program uses a number of useful addresses as follows:

H16A or 362: this is called by Basic whenever a key is pressed. The program intercepts this call. Normally this address contains a 57 code (*Rts*) but the program replaces this with a 126 code (*Jmp*).

H167 or 359: this is called whenever a character is printed. This is intercepted in the way described previously.

The Rom routine to get a character from the keyboard is also used. This is at address 41194.

When the Basic program is Run, the machine code is Poked into reserved memory from address 32001. The program contains a check on the Data statements and will stop if an error is found. The Pokes in lines 710 to 730 set up the interrupts which call the program.

The program can be called by pressing down-arrow key when required. A further pressing of the key returns to normal Basic print routine, which makes the running of programs more convenient.

When first entering and testing the program listing, leave out line 770 or you won't be able to alter it.

# In reverse

Trevor Toms continues his machine code series for the Spectrum — part three

Last week we looked at the storage on simple data items and glanced at how the same ideas could be extended into the machine code equivalent of arrays. The next stage of this development is to consider how expressions can be evaluated and assigned to variables.

The direct comparison with Basic is that we are trying to write the equivalent of:

```
LET x = b(4) * 6 + 2
```

in machine code.

The first step is to rewrite your expression in "reverse Polish" notation — just like calculators of a few years back (and today if you're lucky enough to afford a Hewlett Packard!).

So our expression above would be written as:

```
b(4) (stack)
6 (stack)
*
2 (stack)
+
```

giving a final result which will be stored in data area X using methods adopted last week.

Each operator (eg. \* or + in this case) operates on the top two stacked items to give a resulting value on the top of the stack. If you've used Forth, you'll be very familiar with this concept — in fact, one reason why Forth is so fast is because the concepts translate very readily into machine code.

As a good guideline, try to keep to a strict convention regarding the use of registers in your routines. Personally, when writing a "Basic translation" program I use the HL registers to hold the "latest result" of any expression, the DE registers to hold array subscripts or second operand from an arithmetic operation, and the stack to hold the "latest result" when a nested expression is required.

Once again, it is worth stressing that this is not necessarily the best way to write machine code, but it is safe and helps assure working code until you have built up enough confidence to spread your horizons.

So we can now translate the small example above into machine code as follows:

```
b(4) LD DE,4
CALL GET$ITEM ;see last week
6 LD DE,6 ;direct value
CALL MUL16 ;see 1st week
2 LD DE,2 ;direct value
ADD HL,DE ;add it in HL
LET x = LD (X),HL
```

Since the MUL16 and DIV16 routines leave their result in HL, you can see that the code required to evaluate this type of expression is extremely compact.

The equivalent of Basic functions be-

comes only a little more complex. By writing a series of small subroutines which operate on the value in registers HL and leave the result in HL, you can simulate most of the Spectrum functions quite easily. Listing 1 gives a handful of subroutines that simulate a fair proportion of the normal functions.

Remember that you cannot easily use floating point or strings in machine code without some degree of effort, so functions such as Sin, Log, STR\$, etc. are not included in this list. Nevertheless, you can write some extremely powerful programs without these functions. In future articles you'll see how some of these limitations can be overcome.

The routines are: Equal, Not\$Equal, Greater\$Than, Less\$Than, ZxAnd, ZxOr, ZxNot, ZxIn, ZxPeek. In each case (except the last two), the routine operates on two values supplied in the HL and DE register pairs, leaving a "true" or "false" result in

HL. As with Basic, "true" is represented by the value 1, while "false" is given by the value 0. It may have been more logical to use the value -1 (0FFFFh) for "true", but this would be inconsistent with Basic, and would therefore require some additional translation when rewriting your Basic program in machine code.

The last two are examples of the way that true binary functions can be implemented — the subroutines operate on the value in HL and leave the result in HL. In practice, you can write the "peek" routine more efficiently by using in-line code instead of calling a subroutine, but, as I have said earlier, keeping things consistent is best for now.

Below is a better example of how to use some of these routines alongside an equivalent Basic program (see also listing 2).

Next week we start to look at ways of using the Spectrum hardware from machine code — this is where things start hotting up!

By Trevor Toms, author of *The Spectrum Pocket Book*, published by Phipps Associates.

```
5 LET result = 0
LD HL,0 ;set RESULT to zero
LD (result),HL
10 LET char = INKEY$ IF char = 0 THEN GO TO 10
LD A, char ;select keyboard
CALL SELDEV ;wait for a key
CALL AWAIT$KEY ;put keycode into HL
LD A, char
LD HL,0
LD (char),HL ;and save it
20 IF (char = 48) OR (char = 58) THEN GO TO 100
LD DE,48 ;check if = 48
CALL LESS$THAN
LD A,1 ;test if true reply
OR A
JR NZ,100 ;yes -- jump forward
LD HL,(char) ;reload character value
LD DE,58 ;check if = 58
CALL GREATER$THAN
LD A,1 ;test for true reply
OR A
JR NZ,100 ;jump forward if true
30 LET result = (result * 10) + (char - 48)
LD HL,(result) ;load current result
LD DE,10
CALL MUL16 ;multiply by 10
PUSH HL ;save on stack
XOR A ;clear carry flag
LD HL,(char) ;load character value
LD DE,48
SBC HL,DE ;subtract 48
POP DE ;get (RESULT * 10) into DE
ADD HL,DE ;add to latest result
LD (result),HL ;save
40 GO TO 10
JR L10 ;jump back for more
100 PRINT result
LD A,2 ;select screen output
CALL SELDEV ;load result value
LD BC,(result) ;print it
CALL PRINT$NUM
110 STOP
RET ;return to Basic
```

# Unlock Your Imagination

## SCOPE

Computer Graphics Language

- ★ A VERY POWERFUL, TRUE MULTITASK LANGUAGE
- ★ AS FAST AS MACHINE CODE
- ★ SIMPLER THAN BASIC

Write Machine Code in a fraction of the time currently required

SCOPE is available from most good quality dealers and selected branches of

**WHSMITH**

For details of how to get your copy of the book published by WHSMITH, please contact your local marketing

### TECHNICAL DETAILS

SCOPE is a fully structured multitask language specifically for writing *graphics, animation and sound*. Being fully compatible with BASIC, it is ideal for writing both arcade and adventure style games. Additionally, with SCOPE present in high memory it can be used as an assembler with SCOPE words as plain language mnemonics. Therefore no knowledge of machine code is required. The language is extremely easy to comprehend and is very powerful indeed providing many features not available from BASIC.

**SCOPE HAS TO BE USED TO BE BELIEVED**

## Programming by angles

Czes Kosniowski explains the use of trigonometry in programming

Seldom can we directly measure the heights of tall buildings, hills, trees, etc. One way to find the height of a building or tree is to stand away from the object. Now measure the angle between the horizontal and the highest point of the object (using a clinometer, which is just a glorified protractor), then measure the distance between you and the object. By drawing a scale drawing the height of the object can be readily estimated. See Figure 1.

Figure 1

You couldn't use the same technique to measure the height of a mountain peak which is miles away and covered in clouds. The clouds would get in your way, and you couldn't measure the horizontal distance. An instrument such as a tellinometer would help. This uses radar to locate the top of the mountain. It also measures the angle and distance between you and the top. A scale drawing would provide a way of calculating the height of the mountain. (Figure 2).

Figure 2

As a further example suppose we wanted to find the width of a large pond or lake (see Figure 3). A scale drawing drawn from the measurements made could be produced and the required distance estimated.

Figure 3

Here is a related example. A navigator is at a certain position A. He is 150 km due west of city B and 188 km from city C. The angle between the two cities is 60 degrees measured from his position. How far apart are the two cities? Again, a scale drawing could provide the answer.

Although scale drawing will provide answers to the problems mentioned above they are rough and ready. And it is not

always practicable or accurate to produce scale drawings. An alternative approach is to do it by trigonometry using your Commodore 64.

### The trigonometry functions

The three important trigonometric functions are SIN (sine function), COS (cosine function) and TAN (tangent function). They each represent ratios of the various sides of a right-angled triangle. For example, the triangle in Figure 4 is a right-angled triangle. The angle at the corner of the left is denoted by the symbol X. The three sides of the triangle will be referred to as the side adjacent to X, the side opposite X, and the hypotenuse (the longest side).

$$\text{TAN}(X) = \frac{\text{opposite}}{\text{adjacent}}$$

$$\text{SIN}(X) = \frac{\text{opposite}}{\text{hypotenuse}}$$

$$\text{COS}(X) = \frac{\text{adjacent}}{\text{hypotenuse}}$$

Some useful values to remember are the following:

$$\begin{aligned}\text{SIN}(0^\circ) &= 0 \\ \text{SIN}(30^\circ) &= 0.5 \\ \text{SIN}(45^\circ) &= 1/\text{SQRT}(2) \\ \text{SIN}(60^\circ) &= \text{SQRT}(3)/2 \\ \text{SIN}(90^\circ) &= 1\end{aligned}$$

$$\begin{aligned}\text{COS}(0^\circ) &= 1 \\ \text{COS}(30^\circ) &= \text{SQRT}(3)/2 \\ \text{COS}(45^\circ) &= 1/\text{SQRT}(2) \\ \text{COS}(60^\circ) &= 0.5 \\ \text{COS}(90^\circ) &= 0\end{aligned}$$

$$\begin{aligned}\text{TAN}(0^\circ) &= 0 \\ \text{TAN}(30^\circ) &= 1/\text{SQRT}(3) \\ \text{TAN}(45^\circ) &= 1 \\ \text{TAN}(60^\circ) &= \text{SQRT}(3)\end{aligned}$$

Figure 4

If you know the angle X and one of the three lengths of a right-angled triangle then you can find the other two lengths. For example, if you know the angle X and the length of the adjacent side then the other two lengths are given by the following formulae.

$$\begin{aligned}\text{opposite} &= \text{TAN}(X) \times \text{adjacent} \\ \text{hypotenuse} &= \text{adjacent} / \text{COS}(X)\end{aligned}$$

Another way of describing the trigonometric function is by using a circle of radius 1 unit. Measure out the angle required as shown in Figure 5. The values of the various trigonometric functions are indicated.

Figure 5

Mathematically distances are measured horizontally from left to right and vertically upwards. This explains why, for instance,  $\cos(X)$  has a negative value.

Figure 6

You can obtain SIN, COS and TAN of an angle X by typing `Print Sin(X)`, etc, substituting the appropriate value of X. The only possible problem is that the Commodore 64, like most microcomputers, expects the angles in radians, not degrees. Fortunately, degrees can be turned into radians and vice versa very easily.

First of all, what is a radian? Draw a circle of radius 1 unit. Measure along the circumference of your circle a distance which is equal to the radius of the circle. The angle subtended by this arc is 1 radian. 1 radian is approximately 57°. See Figure 7.

Figure 7

The number  $\pi$  is both remarkable and famous. It is defined to be the ratio of the circumference of a circle to its diameter. The (approximate) value of  $\pi$  is stored in your Commodore 64. Simply type `Print pi` to reveal the value stored. In a circle of radius 1 unit the diameter is 2 units. Thus the circumference of this circle is  $2 \times \pi$  and so there are  $2 \times \pi$  radians in a complete circle. Since there are 360 degrees in a complete circle we see that:

$$\begin{aligned}360^\circ &= 2 \times \pi \text{ radians, and} \\ 180^\circ &= \pi \text{ radians}\end{aligned}$$

We can convert degrees to radians and vice versa quite easily with the following formulae:

$$X \text{ degrees} = X \times \pi / 180 \text{ radians}$$

$$Y \text{ radians} = Y \times 180 / \pi \text{ degrees}$$

The following program can be used to find lengths of right-angled triangles. You need to input an angle and one distance. Program 1 calculates the other two lengths.

## Inverse functions

Suppose we know the lengths of the sides of a right-angled triangle, can we determine the various angles? The answer is yes, and we use the inverse trigonometric functions to do this. Given an angle  $X$  then  $\tan(X)$  gives us a number, the tangent of the angle  $X$ . Conversely, given a number  $N$  we could find an angle whose tangent is that number. Such an angle could then be called the inverse tangent of  $N$ . It is usually denoted by  $\text{Atn}(N)$ , the arc tangent of  $N$ .

Look at the triangle in Figure 8.

Figure 8

If we know the values of  $A$  and  $B$  then we could find the value of the angle  $X$ . We know that  $\tan(X) = B/A$ , thus  $X = \text{Atn}(B/A)$ . You can put in the appropriate values in this expression and get your Commodore 64 to print out the answer. Of course, the answer would be in radians. To get an answer in degrees you need to multiply the result by  $180/\pi$ .

The trigonometric functions SIN and COS also have inverse functions denoted by  $\text{Asn}$  (arc sine) and  $\text{Acs}$  (arc cosine)

respectively.  $\text{Asn}(N)$  is that angle whose sine is  $N$ ; similarly  $\text{Acs}(N)$  is that angle whose cosine is  $N$ . Unfortunately the Commodore 64, in common with many other microcomputers, does not contain these functions in its basic. However they can be easily obtained from the  $\text{Atn}$  function.

To see how we obtain  $\text{Asn}$  from  $\text{Atn}$ , look at the right-angled triangle with a hypotenuse of length 1 unit in Figure 9.

Figure 9

Now suppose that we know the value of  $B$ , and we want to find the angle  $X$ . We know that  $\sin(X) = B$  so that  $X = \text{Asn}(B)$ , but as was mentioned  $\text{Asn}$  isn't present in the Commodore 64. If we knew the value of  $A$  then we could use  $\text{Atn}$  since  $X = \text{Atn}(B/A)$  also. To find  $A$  we use Pythagoras' theorem.

Recall the theorem of Pythagoras. In words Pythagoras' theorem states that the square of the hypotenuse of a right-angled triangle is equal to the sum of the squares of the other two sides. In symbols we have  $C^2 = A^2 + B^2$

where  $C$  is the length of the hypotenuse. Since our hypotenuse is of length 1 we have:

$$1 = A^2 + B^2$$

or

$$A^2 = 1 - B^2$$

and so

$$A = \text{SOR}(1 - B^2)$$

Since  $X = \text{Atn}(B/A)$  we obtain

$$X = \text{ATN}(B/\text{SOR}(1 - B^2))$$

also,  $\text{Asn}(B) = X$ , and so we obtain

$$\text{Asn}(B) = \text{ATN}(B/\text{SOR}(1 - B^2))$$

In a similar way we could produce a formula for  $\text{Acs}(A)$ , one such is given below:

$$\text{Acs}(A) = \pi/2 - \text{ATN}(A/\text{SOR}(1 - A^2))$$

You should notice that  $\text{Acs}(A) = \pi/2 - \text{Asn}(A)$ .

Appendix H of the Commodore 64 User Manual contains other examples of mathematical functions which may be useful.

This is an extract from *Mathematics on the Commodore 64* by Czes Kosniowski, published by Sunshine Books.

# An easy life for some

Keith and Steven Brain take a look at programming aids for the Dragon 32

Moving on from sound and graphics (PCW 24-30 November) here are some programming aids for the Dragon 32 which can make your life much easier.

**Toolkit** (Premier) is for those who prefer to stick to Basic rather than delve into machine code. It is available on disc or as an Eprom (within Delta or separate) and it adds over 50 new commands to Basic. Although programs incorporating the new commands will only run if **Toolkit** is present, the program also has some first-class editing commands which can be used to edit any program.

The full screen editor is a twin cursor type, which allows you to copy characters from the editing cursor to the normal cursor. You can use the full screen editor in co-operation with the Dragon's standard editing facilities (so that there are not a lot of new commands to remember), or you can recopy a whole line. To save the problem of text scrolling off the top of the screen, you can move text to one of two other text screens, and also swap text screens.

Extensive search and replace facilities are included and **Plan** gives you total control over output to a printer controlling factors such as paging, column length, margin, etc. Extra cassette handling commands are **Cdir** (gives a directory of a tape) and **Cappend** (appends from tape).

**Inkey** is like **Inkey\$**, but gives the Ascii value of a key pressed, while **Key\$** and **Key** are like **Inkey\$** and **Inkey**, but with built-in auto-repeat. **Inp n,AS** gives you a controllable length for an input, so that you can prevent an ignorant (or malicious) user entering an illegally long string. **Deek** and **Doke Peek** and **Doke Poke** two bytes at a time with a 16-bit number. **Beep On/Off** controls

■ keyboard beep and **Break On/Break Off** enables/disables the break key.

**Echo x-y,z** copies lines x to y from z downwards and **Prune** removes everything after a **Rem** statement. **Vars** prints the active variable in a program. **Pause** waits for a specified number of milliseconds and **Hang** waits for a key to be pressed. A number of commands are provided to control low-res graphics. The comprehensive error handling commands (**Err**, **Err n**, **Error Goto n**, **Error Off**, **Resume**, **Resume Next**, and **Resume Goto n**) can be used to prevent your program from stopping if there is an error.

The **Resume** commands are important, as they allow you to continue immediately with your program (unlike the error commands in **Dragondos**). **Old** attempts to rescue a crashed program. You are allowed to **Goto** and **Gosub** line numbers specified as variables and you can program the keys A-H with up to 23 characters including **Enter**. For example, ■ you use:

PROG "PAGE" + CHR\$(13) + "BEEP" + CHR\$(13) + "HANG" + CHR\$(13) + "RUN" + CHR\$(13)

then when you press **Shift** and **A**, it will **Page** your program, **Beep**, **Hang** and then **Run**.

Even after all that description we have still left out some very useful features, so you can probably understand why we believe the Premier **Toolkit** is outstanding value at £29.95.

**Encoder 09** (Premier) is a monitor, assembler, and disassembler for the Dragon which comes on cassette, disc (Delta), or Eprom (available as an option on the Delta Dos cartridge). The comprehensive manual is 52 pages long and includes details of the 6809 registers, instruction sets and different types of addressing, as well as the operation of the system.

The program starts up in the monitor mode, where a colon prompt before the cursor informs you that you are using the monitor. Typing ■ moves you to Basic and **AM** returns to the monitor. You can examine and change memory locations and search the memory for a Hex number or an Ascii string.

**Block** moves are allowed and you can execute machine code routines from the monitor, which will convert or calculate Hexadecimal, Octal, Binary and Decimal values, and also has extensive breakpoint routines. It is fully compatible with Dragon Basic and there is automatic line numbering and tabulation and ■ full complement of pseudo-opcodes.

You can incorporate assembly language within Basic programs by enclosing the code between square brackets. You can perform ■ test assemble to check the syntax before moving on to the real thing and assembly can be to memory, cassette,

printer, or disc. There are 19 error messages ■ help sort out any problems.

**Encoder 09** costs £29.95 on tape, £34.95 on Eprom as a Delta addition, and £39.95 on cartridge. We found it easy to use and, if you want to get into machine code programming, then this is a sound investment.

**Memory Module** (Moray Microsystems) is a low power Cmos static Ram memory module running off Ni-Cads which are trickle charged when the computer is on. It can be used to provide instant memory back-up ■ case of a system crash or provide a temporary, reusable, "cartridge" facility. The unit is larger than a normal cartridge and, ■ prevent it flopping about in the expansion port, there are small plastic feet underneath the case. Before turning the Dragon off, you must remember to turn the memory protection switch on and, before you recover or store programs, you must put the memory protection off.

It is easy to store and retrieve a program using a small machine code routine. You could put this routine at the end of a Basic program and instead of **Csaving** the latest copy of your program every half an hour (in case the gremlins get loose ■ the mains supply), you could dump it into the memory module.

The module is available in a number of Ram configurations (4 to 14K) but, for example, will hold 4K for 83 days using ultra low power Cmos (£42) or 16.6 days using lower power Cmos (£39). This product is rather specialised, but would be of value in program development (especially if you don't have a disc system) or ■ education where you might want to change the cartridge contents at regular intervals.

The standard Dragon 32 interface ■ of the parallel Centronics type, although the new Dragon 64 also has a serial RS232 port. Many other machines have RS232 and the addition of this facility allows you ■ communicate more widely.

**RS232C Interface** (Goldsword Computers/CP Engineering) ■ ■ cartridge which comes with a detailed manual which explains the RS232 standard and how to transmit and receive data. Two demonstration programs are provided, the first being an interface test and the second a program to transmit the graphics screen from one Dragon to another (as we only

had a single interface we could not test the latter). The baud rate is easily controlled by an external, colour-coded, dip switch, and a brief description of the electronic specification is included.

It allows you to use any serial printer on the Dragon, communicate between your Dragon and any other machine with an RS232 interface, and eventually communicate through a modem (which is currently under development) to the whole world, although of course you still need to write the software to control it! This is another rather specialised product which

ly extends the power of your Dragon into interesting control applications.

Last, but not least, there are the lightpens which plug directly into the joystick ports of the Dragon and allow you to control the execution of your programs without touching a key. The Trojan Lightpen (Trojan Products) is a relatively simple device supplied with a program on cassette and a combination of instructions printed on the cassette insert and incorporated into the program. The main menu allows you to select options to run through the instructions, draw a simple histogram

will be of interest to the minority, although no doubt invaluable to them. The interface has already been used to connect the Dragon to a number of pieces of specialised scientific equipment.

In addition to serial and parallel ports, it is also useful to have straightforward input and output connections for control applications. Dragon Interface (Moray Microsystems) is an input/output module which allows the Dragon cartridge port to be used as a 4 or 8 input port (opto-isolated) with up to 8 relay output ports. Once the module has been configured, inputs are easily ready by *Peeking* location 49152 and relays operated/released by *Poking* appropriate values to 49153.

The module will accept dc inputs from +3 to +15 volts and output channels will switch up to 220 volts at 0.5 amps. Data at the input channels is indicated by integral leds and connections to the unit are made via clearly marked terminal blocks, once you have managed to persuade four very small hex-head screws to come loose.

Possible applications of this unit are many and varied (we hope to report further on this in the near future), for example, you could easily control your model railway (or robot?). Another obvious application is to build a sophisticated intelligent burglar alarm system which can tell the difference between your cat sitting on the mat or rattling the window and a real threat.

The price depends on the specification, but it is based on a flat charge of £20 for 4 inputs or £28 for 8 inputs and then £3 per relay output (so that a full specification 8 input/8 output module costs £52). An add-on power module is also being made available (at around £40) which will switch 13 amp mains loads so that you can really let your computer control your central heating, greenhouse etc. This unit certainly

use the keyboard as well, which rather defeats the object of using a lightpen! Its value seems rather limited, but it is relatively cheap at £10.

The Datapen Lightpen (Datapen Microtechnology) is supplied with comprehensive instructions and a tape with three programs. It differs from all other light pens available for the Dragon in that it is a far more sophisticated (and rather more expensive at £25) beast. Important unusual features are a button mounted on the pen itself, which controls operation, and an led which indicates data capture.

The pen is also easier to use than most, because of its larger size and because the end is flattened and covered with non-slip rubber. It also seemed quite insensitive to changes in ambient light.

The first program provided is an introduction which allows you to work through instructions on how the pen works, produce a low-res flowchart, or find an X,Y screen position. The second program is *Sketch* which you can draw directly on

the screen using any Pmode. Four options can be selected with the pen (*Draw*, *Erase*, *Blank* and *Pain*) and, by also using the keyboard, you can save to tape, draw a circle, and change the accuracy factor and measurement bars. This program uses much faster screen strobe (which can easily be modified) and it clearly demonstrates the superiority of the Datapen.

The *Shape Create* program is very useful, as it allows you to produce designs directly on a screen matrix and then save these as a "library" in memory or on tape and use them later. The *Create more sprites* option allows you to design scaled-up sprites on the screen, while a normal sized version is drawn alongside, with total control by the lightpen. If you select the *Create Drawing* mode, then you can pick a sprite from the library you created and put it at any screen position at any of four 90-degree angles.

Although we have tended to be rather cynical about the value of lightpens in the past, the Datapen has transformed our views and is no doubt the best buy for anyone with a serious use.

Adding on the facilities of all these products at the same time would certainly produce one hell of a machine, but with all those "bolt-on-goodies" we are sure that you would also need some "go-faster" stripes as well.

# To the letter

Ian and Damian Inger present Word Search for the 32K BBC

This program is an educational type, for use with a group of pupils rather than one person alone. The teacher has to write a short passage (20 lines of 31 characters)

on the screen which then clears and the pupils are presented with a screen of coloured blocks, one for each letter. All punctuation marks and spaces are put on

to the screen for the pupils.

At random intervals, all occurrences of the guess letter are filled in on the screen. At 15 guess intervals, the pupils are invited to write out a two-line message, saying what they think the passage is about.

The program is designed to encourage group discussion about the positioning of letters and the frequency of certain letters within the passage.

# Once you've got to grips with the Rock 'n' Roll game, flip-over and get your teeth into Dracula.

New K-tel Doublesiders are great fun and great value which ever way round you look at them.

For only £6.95 you don't just get one top quality computer game, you get two.

When you've finished playing one side simply flip it over (just like a music cassette) and move off on a second totally different, equally gripping game.

Take your choice. Already there are five Doublesiders to choose

**1** It's Only Rock 'n' Roll Can you become a superstar? A Rock 'n' Roll idol...Or are you just another has been? You've got a lot of energy, a bit of money and a great future. But can you stay the course, stand the heartbreaking disappointments, fraud, scandal, even arrest? Can you capture the hearts and wallets of the public and become a Rock 'n' Roll idol?

**2** Tomb Of Dracula Darkness is falling...The vampires are hungry...You can't go back...Your only chance of survival lies ahead. The walls are cold and clammy. With each step you remember the horrors ahead; ghouls, zombies and pits of chinking slime. In your hand you have but seven silver stakes with which to defend yourself...Dare you face the ultimate evil...and win.

from — three suitable for the ZX Spectrum and two for the Commodore Vic 20 — and there are more to come.

So hurry to the shops now and see for yourself how K-tel Doublesiders really do give you twice the fun with two on one.

## K-TEL DOUBLESIDERS

Twice the fun with two on one.

# "ADVENTURES INTO

AVAILABLE FROM W.H. SMITH  
AND ALL LEADING CO.

## Transylvanian Tower

A spine chilling adventure...  
enter via the dungeons...  
navigate your way through  
500 3-D rooms... survive  
the swooping vampire bats  
... reach the terrifying top...  
confront and kill Count  
Kreepie, ridding the world  
of this Transylvanian Terror.  
Can you survive the Top of  
the Tower? Full save routine

# More than fun and games!

## FIRST STEPS with the Mr. Men

by Primer Educational Software

**T**he ever-popular Mr. Men help prepare young children for reading with four simple and absorbing games designed to exercise essential skills as well as entertain.

An easy-to-use, colour-coded key guide is included with an illustrated introductory book, featuring the Mr.

Men. For ages 4 to 8 years. Available now on cassette for the BBC  $\square$  (Spectrum 48K and Electron versions coming shortly.) **£8.95**

## QUICK THINKING!

by Widdgit Software

**T**wo mind-stretching, space-age games to test mental arithmetic and nimble fingers.

In **Sum Vaders** alien robots invade the earth. Only quick thinking and fast reactions can prevent them. Several levels of difficulty and a two-player game with  $\square$  handicap option make Sum Vaders equally testing for all family members, from  $\square$  years to adult.

**Robot Tables** challenges the young player to make a series of perfect robots.

Knowing your multiplication tables is the key to controlling the robot-making machine. With a learning mode and a testing mode, Robot Tables is a fun way

for early learners, and more advanced children, to master an important and often neglected skill.

Available now on cassette for the Spectrum 48K and Commodore 64 (BBC B and Electron versions coming shortly.) **£6.95**

## CAESAR THE CAT

by Andromeda Software

**M**eet Caesar, a cheeky young cat on duty in a well-stocked larder. He's kept busy chasing  $\square$  gang of hungry mice eating the family's food. Playing against the clock, you guide Caesar along crowded shelves to pounce on the mice.

A fast, colourful, all-action, arcade-style game with catchy music and a best-score record. Challenging for high-scoring arcade addicts as well as great fun to play for the novice.

Available on cassette for the Commodore 64

**£8.95**

Prices include VAT and post and packaging. MIRRORSOFT programs are available from selected branches of W.H. Smith and Boots, and other leading software stockists.

Trade enquiries welcome: phone 01-822 3580.

Write your own machine code adventures

Without any knowledge of machine code whatsoever

# THE QUILL

*THE QUILL* is a major new utility written in machine code which allows even the novice programmer to produce high-speed machine code adventures of superior quality to many available at the moment without any knowledge of machine code whatsoever.

Using a menu selection system you may create well over 500 locations, describe them and connect routes between them. You may then fill them with objects and problems of your choice. Having tested your adventure you may alter and experiment with any section with the greatest of ease. A part formed adventure may be saved to tape for later completion. When you have done so *THE QUILL* will allow you to produce a copy of your adventure which will run independently of the main *QUILL* editor, so that you may give copies away to your friends.

*THE QUILL* is provided with a detailed tutorial manual which covers every aspect of its use in writing adventures. It is impossible to describe all the features of this amazing program in such a small space so we have produced a demonstration cassette which gives further information and an example of its use.

This demo-cassette is available at £2.00, and *THE QUILL* itself at £14.95.

FOR THE 48K SPECTRUM AT £14.95

Our Software is now available from many computer shops nationwide, or direct from us by post or telephone.

SAE for full details of our range.

Dealer enquiries welcome.

# OPEN FORUM

Open Forum is for you to publish your programs and ideas. Take care that the listings you send in are all bug-free. Your documentation should start with a general description of the program and what it does and then give some detail of how the program is constructed. We will pay the *Program of the Week* double our new fee of £6 for each program published.

## Bug Fever

on Spectrum

In this game you control a frog on a lily pond surrounded by reeds. The aim of the

game is to catch as many insects with the frog's sticky tongue as possible. You have 60 seconds in which to do this, four additional seconds are taken away if you jump into the pond. Scores vary depending on the type of insect you catch, ie,

dragonflies, butterflies, or flies. Controls are:

- 5—Skip left
- 8—Skip right
- 6—Jump left
- 7—Jump right

■—Release the frog's tongue.

When a game finishes the program goes into demo mode and you can press 'r' to re-start a new game. When keying in the listing, first run the user defined character

## Arcade software for COMMODORE 64 Action-packed 100% Machine Code

£8.95

£8.95

Scale the ladders, get your Space Hammer, but watch out for the homicidal "Measles" - the slightest touch and you'll be electrocuted. Once the Hammer is in your hands you can start to fill the world with the measles chase them up and down the ladders, through the escape door, lure them into the holes dug with your space hammer. When you trap one, mash over and BOMK! run on the head! But HURRY! If you loiter he will climb out, fill in the hole, and then come in on you, flashing in anger! To add to your problems your oxygen is running out and the measles move faster the more you kill.

A superb arcade-style game with Hall of Fame. Uses one joystick.

"There in the sky I saw the screaming alien birds. They had come to invade our planet. People ran in wild panic and desperation in some vain hope of escape. But there was no escape. The aliens swooped out of the sky killing anyone in their path. I alone decided to stay and fight, but then the eggs hatched and the true horror began."

A fast-moving Galaxian type arcade game with Hall of Fame and bonus lives. Uses one joystick.

### LATES RELEASE — AVAILABLE NOW! CYBERMEN — £8.95

You, our hero, attempt to remove the platinum from the Cosmic space station inhabited by the Cybermen. Programmed to destroy all intruders, their duty is to protect the precious metal. For safe keeping this has been distributed throughout the random maze of corridors in which the space station consists. Not only do the Cybermen home in on you but you will be electrocuted if you touch the maze walls. Your ghastly will kill the Cybermen (the corridors are also patrolled by the indestructible overseer who possesses the unearthly power of moving through walls).

All orders despatched by return first class post.

## HISOFT PASCAL DEV PAC

**Quality ZX SPECTRUM® Software**

**HISOFT PASCAL 4T**

"... I haven't seen any other compiler that could match Hisoft's Pascal... Using the Spectrum Micro—Autumn 1983  
"This is a very impressive product... of benefit to any Spectrum programmer" David Bolton ZX COMPUTING Aug/Sep 1983

Just two comments from full length reviews of our powerful and virtually full implementation of Standard Pascal. The advantages of using Pascal are well known—fast, self-documenting, and above all, structured programs and now, with Hisoft Pascal, you can reap all these benefits on a wide range of home computers, including the 48K Sinclair Spectrum! Hisoft Pascal produces programs that run typically 40 times faster than equivalent ZX BASIC programs and, sometimes, up to 1,000 times faster!

Hisoft Pascal supports FOR DO WHILE DO REPEAT UNTIL CASE... OF, INTEGERS, REALS, CHARACTERS, RECORDS, POINTERS, SETs, ARRAYS etc. etc.—it is not a Tiny Pascal but a virtually full implementation of the language allowing the user to develop true high-level language skills while attaining execution speed close to that of machine code. Complete with a 70 page manual.

**HISOFT DEV PAC 3**

"... DEV PAC is most highly recommended. The documentation is first class" Your Computer May 1983  
"if you write programs in machine code, buy DEV PAC—it is the best currently on the market" Adam Osening, ZX SOFT in Which Micro September 1983

Two comments from reviews of earlier versions of DEV PAC—now we have DEV PAC 3 available, a powerful Z80 assembler with conditional assembly, assembly from tape (to enable generation of very large code files), ORG EQU DEF, DEF, DEF, DEF, labels of any length—in fact all you need for fast (3,000 lines per minute) and powerful assembly programming. But it doesn't stop there: DEV PAC 3 also includes an incredible debugger dis-assembler giving you a front panel display of the Z80 system and allowing extensive debugging of your machine-code program, including single-stepping programs EVEN IN ROM! Open up the secrets of low-level programming with DEV PAC 3.

**Prices:**  
Hisoft Pascal 4T (ZX SPECTRUM) £25 inclusive  
(NewBrain, SHARP MZ700 etc) £35 plus VAT  
Hisoft DEV PAC 3 (ZX SPECTRUM) £14 inclusive  
(NewBrain £25 inclusive)

\*\*\*STOP PRESS\*\*\* Hisoft Pascal for the SPECTRUM now comes complete with a Turtle Graphics package allowing fast and easy production of complex graphic displays

## Pre-defined Sounds

### on Dragon

This short machine code routine shows

what can be done on the Dragon when using machine code. It gives three pre-defined sound effects which are an explosion, laser and gunshot. The sounds are accessed by the *Usro* (value) function whose value is a number between 1 and 3.

I have included a check sum to check for data errors.

As a final point I have discovered a strange *From* routine which deletes all the line numbers from any Basic program. To try it Exec 35996.

## Telephone

### on Spectrum

This program is a menu-driven user-friendly telephone directory for either model of Spectrum. The 48K Spectrum will allow for about 600-700 entries. The necessary alterations for 16K are included below. To alter the program for n entries:

Line 200 to: 200 Dim L\$(n,32)  
Line 2060 to: 2060 For A = 1 to n  
Line 2143 to: 2143 For A = 1 to n  
Line 3050 to: 3050 For A = 1 to n

#### Program notes

20 Colours.  
30 Poke Caps Lock.  
40-90 Print menu.  
200-230 Variables.  
1000-1100 ADD an entry routine.  
2000-2190 DELETE an entry routine.  
3000-3090 SEARCH for an entry routine.

4000 EXIT from program  
5000-5030 LOAD a file.  
6000-6030 SAVE a file.

#### Variables

A = Search, delete loops  
L = Entry number.  
A\$ = Menu List  
D\$ = Entry to be added to list  
E\$ = Entry to be erased  
LS (n,32) = List of n entries each of 32 characters.  
O\$ = Entry to be searched for.  
Y\$ = File to be Saved/Loaded

## Cobwebs

on Dragon

This program will produce a series of

cobweb effects, going through the five  
graphic modes on the Dragon.

### Program notes

10-30 Prints the title.

40-50 Defines the mode and sets up the screen.  
60 Starts loop for drawing cobwebs.  
70-90 Checks how cobwebs are to be drawn.  
100-150 Draws cobwebs.  
160-170 Pause in program, clears screen.  
180-190 Repeat until the loop is finished.

```

10 CLS:PRINT@203;"cobwebs"
20 FOR XX=1 TO 2000
30 NEXT XX
40 FOR S=0 TO 4
50 PMODES,1:PCLS:SCREEN1,1

## RUNESOFT

presents

RUNESOFT

RUNEPACK 1

### ORIC 1

**RUNEPACK 1:** by M R Chambers.  
A collection of six programs for all the family for the 16/48K Oric 1.

- |                  |               |
|------------------|---------------|
| 1. Codebreaker   | 4. Hangman    |
| 2. UXB           | 5. Windmills  |
| 3. Tick-Tack-Toe | 6. Biorhythms |

Great Value at £8.95.

### SPECTRUM 48K

**SPECTREXALM:** by J A Slack.

Can you help Spectra survive 100 years under your government policies... buy power stations... factories... fuel... and food plus many more assets to help Spectra become a world super power. For one or two players, at only £6.95.

Send cheques/PO to:

Runesoft, Charnwood House, Lower  
Parliament Street, Nottingham NG1 3BB

RUNESOFT

SPECTREXALM

Both cassettes are beautifully packaged with gold blocked, black leather effect inlay cards and instruction leaflet.

available soon

DRAGONIA — Dragon 32  
PARADOX — Spectrum 48K

Trade enquiries welcome.

## Wizard Software

### FOR DRAGON 32 ZX SPECTRUM 48K ORIC-1 48K

**DRAGON STAR TREK** **DRAGON 32** **£8.45**

A real time version featuring a 10 x 10 galaxy, shield control, photon torpedoes, status reports, signals received, galactic search, scanner control, warp drive, star bases with docking, black holes, planets and planet landfall, pulsars, novas, stars, asteroids, meteors, shuttles and shuttle docking, automatically converging and attacking Klingons. Four levels of difficulty, comes with instruction manual.

**TIME PORT 1** **DRAGON 32** **£8.45**

The first in a series of five adult strategy adventure games. Direct your robot and acquire the object that the Keeper will ask for and bring it safely back to the Time Port.

**EVICTOR** **DRAGON 32 and Oric-1 48K** **£7.95**  
**ZX SPECTRUM 48K** **£8.95**

An original arcade game presented in high resolution graphics with machine code for extra zip. Evict the aliens from their self-regenerating and defended base. Features lasers, phasors and bombs. Five skill levels. Dragon 32 and Oric-1 versions feature a demonstration mode.

RECOMMENDED THE MICROCOMPUTER SOFTWARE CLUB

All prices inclusive. Mail order. Cheques or postal orders to.

**WIZARD SOFTWARE, DEPT. PCW, PO BOX 23  
DUNFERMLINE, FIFE KY11 5RW**

Also available from software retailers in UK, Europe and Africa  
Send large SAE (7in. x 5in.) for full program catalogue  
Royalties paid for superior quality DRAGON 32 and Oric-1 software

## New from SUNSHINE

### Master your ZX Microdrive

programs, machine code and  
networking by Andrew Pennell

Master your ZX Microdrive contains all the information you will ever need use the ZX Microdrive to the full. Clearly explained, with many examples, it is equally suitable for the relative newcomer to BASIC through to the experienced machine code programmer.

Andrew Pennell has also included a full database file handling program to let you put the ZX Microdrive practical use with your Sinclair Spectrum.

Look out for the Sunshine range in W.H. Smith's, Boots, John Manx, other leading retail chains and through our national network of book shops and specialist stores. Dealer Enquiries: 01-437 4343

ISBN 0 94608 19 X

## SPECTRUM EXTENDED BASIC

—IMPROVE YOUR PROGRAMMING —EASE DE-BUGGING  
—HELPS YOU ADD STRUCTURE TO YOUR PROGRAMS

The ten additional BASIC commands provided by Spectrum Extended Basic are considered an essential aid for most programming applications, so much so that many of these commands are standard features on other Basics.

The program is compact, occupying less than 5K memory, is user friendly—requiring only a two key entry—and incorporates syntax checking.

The program commands are used and entered just like normal Basic keywords, the program operates bytrapping your usual keyboard input and testing for any of the ten additional commands.

The extra commands available are:

- AUTO auto line number, start and interval definable.
- CLOCK ON/OFF 12 hour clock displayed on screen
- DELETE Basic lineblock delete
- EXAMINE reads tape headers and displays information.
- FIND finds specified string in Basic program
- MEMORY displays memory status
- RENUMBER full line renumber with GOSUBs and GOTOs
- SCROLL ON/OFF continuous scrolling
- TRACE ON/OFF shows program execution, displays line and statement currently executed
- VARIABLES displays variable names and contents.

48K Spectrum Extended Spectrum—£8.95

Also available at Boots, W.H. Smith and all good computer shops.

DELIVERY: UK—prices include VAT and postage & packing

Send SAE for Catalogue.

EUROPE—add 80p per program

ALL OTHER PLACES—for air mail add for the first program and 50p for each subsequent program. Surface delivery add 80p per program.

software

Send Cheque, Postal Order or Access No. to:  
CP SOFTWARE, Dept PCW1A

# Mastercode Assembler for the Commodore 64

Full Commodore 64 Assembler/Disassembler

**£14.95**

inc VAT

**Mastercode** ■ a substantial and complex program of use to anyone interested in writing machine code on the Commodore 64. Its features include:

- ☐ Machinecode monitor
- ☐ File Editor
- ☐ Disassembler
- ☐ Assembler

Mastercode is a full two pass assembler. It accepts labels, variables and equations within assembly language programs. It is possible to store programs anywhere in memory, even in parts occupied by the Assembler. Programs can be saved to either tape or disc.

#### The Machine Code Monitor Includes:

- OUTPUT OF MEMORY TO SCREEN OR PRINTER ■ MODIFICATION OF MEMORY ■ EXECUTION OF MACHINE CODE PROGRAMS ■ SAVING OF MACHINE CODE FILES ON TO TAPE OR DISC
- LOADING OF MACHINE CODE FILES FROM TAPE OR DISC ■ STEP ■ STEP TRACING OF THE EXECUTION OF A MACHINE CODE PROGRAM, INCLUDING DISPLAY OF REGISTER CONTENTS.

The Disassembler will translate into assembly language the contents of any area of memory, whether the 64's ROM or a user program. Output may be sent either to the screen or a printer.

#### The File Editor Includes:

- ENTRY OF NUMBERED LINES OF ASSEMBLY LANGUAGE INSTRUCTIONS ■ LISTING, INDIVIDUALLY OR IN BLOCKS, OF PREVIOUSLY ENTERED LINES ■ DELETION, INDIVIDUALLY OR IN BLOCKS, OF EXISTING LINES ■ RENUMBERING OF EXISTING LINES ■ SAVING OF ASSEMBLY LANGUAGE FILES TO TAPE OR DISC ■ LOADING OF ASSEMBLY LANGUAGE FILES FROM TAPE OR DISC ■ ADDITION OF A BLOCK OF MEMORY SPECIFIED BY THE USER TO THE USER'S ASSEMBLY PROGRAM

The Assembler allows the translation of assembly language programs into machine code with full error checking, labelling and a range of assembler directives.

## Averages

### on Spectrum

The program is called "averages" and I use it to work out mean and modal averages. It is written for the ZX Spectrum (either model) but should prove easy to convert to run on most other Basics. At the

start of the program you will be asked how many numbers you wish to compare. Next you type in those numbers (entering each number in turn using *Enter*). Finally the computer will print a list of the numbers entered followed by the modal average (if there is one), the number of times it appears and the mean average. The option for a printout is included.

#### Program notes

- 100-200 Allows for the inputting of numbers and sets up the variables.
- 210-250 Compares numbers inputted to see if any are the same.
- 260-290 Finds mode (greatest value of d).
- 300-370 Prints numbers, mode and the number of times that the mode appears.
- 380-420 Works out and prints mean.
- 425-470 Options available.
- 500-590 Printout.

```

## Microradio

GW6JJN

### Broadcasting

This week I would like to mention another kind of radio, the broadcast radio. The BBC and IBA to be exact. Microradio has so far only dealt with the amateur and CB kind radio, but you can't keep a good thing down and the big boys are getting into the act.

Radio West in the Bristol area now has an extremely large audience for their *Data-rama* programme. They transmit a microshow which discusses aspects of computing and then, late at night when only the computer freaks are about, they transmit computer

programmes (the kind you Load). This ghastly noise can be heard in the small hours on the FM and medium wave bands for Spectrum and BBC computers. All that is needed is the trusty radio cassette recorder and there are programs to be had for free. I must add that the disc jockeys do not talk over the intro as they do on pop records much to the frustration of some.

The word is spreading and now Radio Victory is at it. They are sending Screens over the air with their logo and that of a certain software company not a million miles from Portsmouth; shades of Pimania no less.

As if this was not enough, BBC Radio Wales is the latest candidate vying for the poor micros time. On Fridays at 6.30 pm they have their own computer programme and will be transmitting the *Loading*

kind as well. These will be in Basic for most microcomputers (and, I expect, Welsh for the Dragon). Radio Wales transmits its broadcasts and funny noises on 882Khz in the medium wave.

All of this has been too much for me. I don't get enough sleep as it is. There is a rumour that I have been seen coming and going about the studios of Swansea Sound Radio. I have always had a hankering to be a floppy disc jockey, so who knows, but that's another story.

A quick word for all those lucky people who live in the Duchy of Cornwall. The Cornish Amateur Radio Club now has a computer section devoted to the likes of us. I attended one of these meetings a while ago and was very impressed. Radio computing is becoming very popular down in the southwest where most

people have BBC micros, as I understand. Local listeners who cannot understand conversations on the amateur bands emanating from the Cornwall area can now be told that *The Philosophers Quest* has been solved and the region is back to normal.

One point: please note that information about the Cornish Club can be obtained from Simon Rodda on Penzance 3948. A second point is that when writing to the addresses I give in this column, a stamped addressed envelope will always bring a reply. It is common courtesy, after all.

Ray Berry GW6JJN

This series of articles is designed for radio and microcomputer enthusiasts alike. If you have any queries that you want answered, hints and tips to share, or topics that you would like to see covered, write to: Ray Berry, Microradio, Popular Computing Weekly, 12-13 Little Newport Street, London WC2R 3LD.

# THE DAN DIAMOND TRILOGY

*My name is Diamond,  
Dan Diamond,*

and this is my story. A story of beautiful mermaids, bored robots and dank, dark dungeons. A story that started one muggy day in New York, and like the Big Apple, it's rotten to the core.

The Dan Diamond Trilogy is three separate adventure games. Each game may be played on its own, but clues may be found in the earlier adventures which may help later on. Each game comes with a lavishly illustrated 20-page case file, and hints (both helpful and misleading) which have been hidden in the illustrations.

**Part I. Franklin's Tomb**, in which our hero receives a mysterious plea for help which leads him to a hidden tomb and the mystery of the stargate.

**Part II. Lost in Space**, in which our hero finds himself stranded on a derelict spacecraft, doomed to travel endlessly through space, or find a way out.

**Part III. Fishy Business**, in which our hero lands on a watery planet, discovers the source of the plea for help and saves the day.

All three programs cost £9.95 each and are available for the DRAGON 32, BBC MODEL B and 48k ORIC-1 microcomputers. (note: Fishy Business for the BBC and ORIC will be available February 1984).

*It must be the most consistently  
enjoyable adventure game  
I've ever played.

## Tony Bridge's Adventure Corner

### Number one

I have a letter this week from Blair McGlashan of Swanley in Kent. He has a few tips for you to try out while playing *The Hobbit*.

"You may have noticed," he writes, "how the rope may be used for getting the torches in the goblin's cavern, and the elvenking's hall, by tying the torch and then taking the rope. You now carry the rope, with the torch tied to it."

Another anomaly that Blair has noticed is that the barrel can be used to carry objects that would otherwise be too heavy to carry. Now, says Blair, the player is able to use this in order to take any object that is mentioned in the program's description of each location. Thus, should you wish, for some strange reason, to collect the curtain ■ Beorn's House, go about it this way:

TIE CURTAIN

OPEN BARREL (you will, of course, have to have the Barrel)

PUT ROPE IN BARREL (ditto the rope)

EMPTY BARREL

UNTIE ROPE

Now, if you ask the computer for an inventory, you should find that you are carrying the curtain. This can be repeated for any inanimate object present at any of the locations, the only stumbling-block being that only that object may be carried.

Blair also throws some light on the "Barrelbug" that many of us have noticed — the one that causes the program to crash, or freeze, when you try to climb into the barrel. He points out that in order to climb into the barrel, the adventurer will probably have taken it beforehand. And you cannot, logically, be in something if you are also carrying it — so the computer locks up.

Finally, while talking of barrels, Blair says: "We see so much today about graphic adventures — and I would argue that this trend has been largely instigated by *The Hobbit*. Some of the serious adventurers among us wonder whether this is a good thing? When I first bought *The Hobbit*, I was impressed by the very good graphics, but the novelty soon wears off and the pictures begin to spoil the game by ruining one's own conceptions, which can be exceptionally vivid. I remember reading that each picture takes up approximately 500 bytes and there are at least 20

pictures in this 10K of space. *The Hobbit* could have had many more locations, such as the eagles' eyrie, and characters."

I'm in two minds about this subject — I love the pictures of *The Hobbit* and, as they are based on Tolkien's original illustrations, they are from the horse's mouth! However, it does get a bit annoying when, for the thousandth time, the goblin's dungeon is S-L-O-W-L-Y drawn. The Mysterious Adventures from Channel 8 (which I can recommend as good text adventures) contain superb *Hobbit*-like graphics. But, ■ a key-press, they can be turned off until called back. In fact, in order to see what objects are at the location, the picture has to be wiped from the screen, which will then reveal the information.

I don't know if *The Hobbit*, beloved though it is of us adventurers in the UK, "largely instigated" the current vogue for graphics in text adventures. After all, the Spectrum, let alone *The Hobbit*, has made little impression in the States so far.

From Southern Lapland, Gunnar Thander writes: "I am glad to say that the first adventure I bought was *The Hobbit*. This definitely made me mad (a micro-adventurer). Have you ever thought about the importance of trying a good, and I mean good, adventure the first time. I think 'old' adventurers really should try to show 'beginners' the good adventures."

We, the Grand Elf and I, try our best in this column, Gunnar, to bring you up to date with new adventures, and also (and very importantly), ■ retain interest in the old favourites... and don't forget to keep an eye on the *New Releases* spot, where Graham Taylor will advise you on the latest programs.

Gunnar continues: "Being non-English, every time I begin a new adventure, I actually face two adventures. The first is the program itself, the second one is the English language!"

Gunnar and his two sons have finally completed *The Hobbit*. If the Thander household ■ feeling a ■ lost and wondering what to try now, there ■ *Valhalla* awaiting them. As I write, this program is number one in the software best-seller charts and Legend, its authors, claim that the adventure will have done one million pounds worth of business by Christmas, which is very well deserved. I'll be looking in more detail at this program later, but for now, it is gratifying to see that this stunning adventure is getting recognition.

While on this subject, let me move on to a letter I have received from George Wells, of Raynes Park in London. George is 69 (which must make him eligible for a senior adventurer award!). He rescued a Spectrum from his daughter, who was about to throw the thing out of a window. George doesn't say which adventure she was playing, but he has now given it a diet of *Valhalla* which it seems to like very much: "I never cease to admire and wonder at the programmer's skill... I also play *The Hobbit*, but, for me, it cannot hold a candle against *Valhalla*. Like the Grand Elf, and

Graham (New Releases) Taylor, George has noticed that the program has a unique reaction to the casual swear-word! He finishes: "At 69 I must be in my second childhood. I once started *Valhalla* at 11.30 am and finished at 1 am the following morning." I hope you have many more happy hours with this wonderful adventure, George!

### The Hobbit Hall of Fame

Steve Redhead (I do mention *Golden Apple*, Steve, and I agree, it is very good), Wayne Greaves, Kevin Marsh and Peter Bywater, who says that he managed it despite not being one of those unfortunates who can go round *Manic Miner* 20 times before the program has loaded, or thrash the life out of *Orbiter* with the telly off! I know how you feel, Peter — even after reading all the letters in *Popular Computing Weekly* about how to beat *Manic Miner* and the others (what is the point, then, ■ playing them, I wonder), I still can't get past Eugene!

Incidentally, Peter, your observations about the various objects such as the golden key, the curious map and so on, are a little off target. You'll find the adventure harder to complete without them.

J Pearson with 92.5 percent (and, no you are certainly not the only one to have bought *Valhalla*), Mike Docherty, Alan and Daphne Davis, Daniel Pitcher, Stuart Wedgwood (who has also scored a magnificent 400 points in Crystal's fantastic *Halls of the Things*) and finally Jason Turtle who has completed *The Hobbit* in four moves!

To finish this week, a couple of pleas for help in Acornsoft's *Castle of Riddles*. Mark Richards, with a grand score of four, would like to know how to progress past the wishing well, having met the bear, seen the mirror, and the blood-sucking creature. Also, what does G.L.O.O.P. mean? Are these the letters on the wall of the corridor of doom, Mark? If so, try going Up from the courtyard, standing in front of the safe, and Saying the word. You could also try getting the bucket from the well (and persevere, it may not come up the first time).

Andrew Goodall is also stuck in *Castle of Riddles*, at the top of the pinnacle after the shooting gallery. Is there a magic word, or does he need a rope? He is also stuck ■ Digital Fantasia's *Time Machine* — how can he get out of the secret room underneath the desert?

In the near future I hope to be looking at some very interesting adventures that come, like *The Hobbit*, complete with novels.

This series of articles is designed for novice and experienced Adventurers alike. Each week Tony Bridge will be looking at different Adventures and advising you on some of the problems and pitfalls you can expect to encounter. So, if you have an Adventure you want reviewed, or if you are stuck in an Adventure and cannot progress any further, write to: Tony Bridge, Adventure Corner, Popular Computing Weekly, 12-13 Little Newport Street, London WC2R 3LD.

# DRAGON 32

## MVC

Air combat and ground strike. 'Joystick' controlled sights, cannon fire and bomb release. Full colour Hi-res graphics, 3D and sound. **£8.95**

## Fruit

Compulsive, addictive, fruit machine. Using your skill with the holds, turn your 100 stake into £10 and beat the system. Hi-res graphics and sound. **£4.95**

## Look and Learn

Educational picture recognition. Hi-res graphics, text and colour. Age 3-10 yrs. **£4.95**

## Pontoon

Super Hi-res graphics, full colour animation and card display. Fascinating, absorbing. **£4.95**

## Missile Command

City defence from attacking missiles, progressively difficult. Arcade type. Joystick. **£4.95**

## Graphics Demonstrator

3D rotation, drawing with joystick, approx. 50 examples of Dragon's impressive graphics. **£4.95**

# ORIC 1

## Flight Simulator

With airspeed, radar, ground/vertical flight path indicators, artificial horizon and altimeter with continuous flight monitor on engine condition, stall speed etc., full colour, Hi-res graphics, 3D and sound. **£6.95**

## Mezmoor

Defeat the guardians of Hyper to retrieve the He crystal. Mean Zippo firing grmlins have orders to blast you on sight! Progressively difficult. Arcade type original. **£6.95**

## Quark 3D Invaders

Superb update of original arcade game, pushes oric to its limits. Full colour and sound. **£8.95**

## Super Fruit

Excellent graphics and definition fruit machine. Full colour and sound, holds etc. **£8.95**

## Tango Patrol 01

Using your skill, locate the aircraft with the radar scanner. Fly your aircraft through hazardous crosswinds and air pockets to land safely. Watch your fuel, watch your artificial horizon, be sure you are level on final approach. Full colour Hi-res graphics, 3D and sound. **£8.50**

# SPACE CRYSTAL

## Space Crystal

Space trading adventure game. Fascinating 3D space travel on your voyage for the Illudium crystal. Black holes, hyper-drive, gumbie planets and space pirates. Full colour and sound. **£3.95**

## LIGHT CONTROL

*B A Cummins of Clonmacnoise Road, Crumlin, Dublin, writes:*

**Q** I own a Vic20 and would like to control lights, etc, through it. How is this done and is there a book on the subject?

**A** This can be done, but you will need a relay of some sort. The Vic will not have enough power to drive a mains relay directly, which means that you will have to use a transistor-driven relay to cope with the low voltage. If you want to use a static relay from the mains, then you will have to take care to isolate the extra mains power supply that would be needed.

As far as I know, there are only two books on the subject, *20 Simple Electronic Projects for the ZX81, Spectrum and other Computers* by Stephen Adams, which is heavily orientated to the Sinclair computers, but it carries a lot of useful general information, and *Simple Interfacing Projects* by Owen Bishop, which is more comprehensive and is not tied to a particular computer, but is more difficult to understand.

## ASCII AND ANSI

*Ian Carleton of St Leonards Hill, Windsor, writes:*

**Q** I am new to computing and am getting my first computer for Christmas (an Acorn Electron). What is the difference between Ascii and Ansi? Does the Electron have them and does it need them?

I do not know if you have answered this before, but I

have seen the words a lot and would like to know because they seem important.

**A** The Electron has Ascii but not Ansi. Ascii stands for American Standard Code for Information Interchange. It is an agreed way of coding the main characters that a computer uses. Thus, a capital letter A has a code of 65 whether it is used on an Electron, Commodore 64, Spectrum, or any of the other common computers.

Although most computers augment the standard by adding their own characters to other code numbers, the main numbers and symbols remain the same. This is very important when it comes to enabling two computers to talk to each other.

Ansi is slightly different. It stands for American National Standards Institute and is a dialect of Basic. The Electron does not use this dialect, instead it uses a similar one to the common Microsoft Basic. Microsoft is used on the Commodore, Dragon and Oric, to name but a few.

## DEDICATED UNIT

*H Jenkins of Salford writes:*

**Q** What is the difference between a monitor and a television?

**A** Essentially, the difference is that one is a dedicated unit and the other is not. A television was not made specifically to receive a signal from a computer — therefore, it contains a lot of circuitry for the decoding and presenting of pictures that have been transmitted over the air. Thus, any signal going into the set via the aerial socket is processed electronically and decoded before it comes on to the screen. All very necessary for a broadcast signal, but equally unnecessary for the signal produced by a computer.

The modulator has to turn the video output from the computer into UHF, so that it can be sent into the television, via the aerial socket. All this electronic manipulation of the signal, causes interference, resulting in a loss of clarity.

A monitor does not have any of the circuitry for decoding television signals. As long as the computer has the cor-

rect output, usually RGB (Red Green Blue) or composite video, then the monitor will accept this. With less electronic processing, there is a clearer signal.

## BLACK AND GREEN

*Lee Millset of Paradise Street, Warwick, writes:*

**Q** I have recently purchased a Vic. It suits my needs very well, except when using the colour black in large blocks or as a screen border colour. In the case of large blocks, the screen distorts in the middle. When using black as a screen colour, the tv flickers uncontrollably and even fiddling with the tuning does not help. I have to turn off the computer to restore the picture.

Could you tell me if this is a computer fault? It works perfectly with a mono set.

*B P Knox of Garden Way, Littleborough, Lancs, also writes:*

I own a Vic20, unexpanded, and it is faulty (I used another Vic to check). When using a black border I lose all green characters, which turn white, while cyan and yellow go pale. Can you tell me what is causing this?

I have been on to Commodore and they say they have not heard of the problem before.

**A** I have met this problem before, though I have never tackled it. I am surprised that Commodore have never met it at all. I have not got a definite answer, but one possible solution was offered to me by Stephen Adams.

Most probably, the problem lies in the Vic (Video Interface Chip), or the associated discrete circuitry. The phasing for the colour green is also the reference phasing for the other colours, so while a different phase means a different colour, it is green from which they take their standard. In addition, black is in fact off — no signal. Therefore, if you

are using black and green, you are in effect just switching the colour on and off.

If you have tried retuning your television and failed, then it is probable that there is a small problem in the video circuitry. Usually this would cause no trouble, but when black and green, which are constantly switching the screen display on and off, are used together, then this might well serve to exacerbate any faults.

In Lee's case it would seem as if the problem is that the Vic chip needs to action the Restart because it is going off phase. This happens when you power up. I am afraid that I can offer little help in fault finding, particularly if the problem comes from within the Vic chip itself.

I am afraid that all I can say is return your computer if it is still under guarantee.

## WHAT IS A RADIAN?

*David Grennell of Banbury, Oxfordshire, writes:*

**Q** I have a Spectrum, but the question I want to ask is not about the Spectrum in particular, I would like to know what a radian is. Never a whizz at maths, I do, however, know a little bit about geometry, but I am sure I never met radians.

Could you explain — is it a set number of degrees or is it a fraction of pi?

**A** Radians can be expressed in terms of pi, but this is not the way a radian is established. There is a clue in the name, radian and the source, radius. In formal terms, a radian is 'the angle subtended at the middle of the circle, by an arc the length of a radius of that circle'.

Imagine a circle of two centimetres, draw the radius. From where it reaches the edge of the circle draw an arc the length of the radius, in this case 2cm. From there draw a second radius. The angle made by these two is one radian.

**Is there anything about your computer you don't understand, and which everyone else seems to take for granted? Whatever your problem PEEK it to Ian Beardsmore and every week he will POKE back as many answers as he can. The address is PEEK & POKE, PCW, 12-13 Little Newport Street, London WC2R 3LD.**

## SPECTRUM KOPYKAT

### IMPROVED PERFORMANCE

Simply the best. Copying any program is  
 now as easy as LOADING and SAVING your  
 own programs. Any ZX Spectrum program  
 can be backed-up onto a fresh tape. Even  
 programs that cannot be stopped can now be  
 copied. 100 per cent machine code. Copies  
 headless/tail. Prints the name. SPECTRUM  
 KOPYKAT uses no program area so full size  
 programs over 41.7K (or 16K machines)  
 are easily duplicated PLUS FREE Header  
 Reader program. Immediate dispatch by  
 first class return of post.

Send cheque/PO for £4.95 to:

### MEDSOFT

61 Ardson Road, Doncaster, DN2 9BB

IT CAN EVEN COPY ITSELF

### SPECTRUM OWNERS

If you write your own games, the tape is a  
 must. Contains machine code routines to  
 move your objects one pixel at a time  
 guaranteeing fast, smooth and fluid frame  
 movement. Gives a professional look to your  
 software £3.00

Trotter Ltd, c/o Burlington Hotel, Burlington  
 Street, London WC1. Tel: 01-279 2823.

## SPECTRUM 007 SPY COPIER.

Makes back-up copies of all your  
 tapes, guaranteed easiest to use;  
 guaranteed to copy more types than  
 any other copier. No gimmicks, there-  
 fore can copy even a full 16K/48K  
 program. Note: only 007 Spy can also  
 copy tapes to microdrive. Send £3.95  
 to: ZX Guaranteed, 29 Chadderton Drive,  
 Unsworth, Bury, Lancs. Tel:  
 061-766 5712.

## ★ ★ TAPE COPIER ★ ★

The most advanced BACK-UP COPIER for  
 ANY SPECTRUM available. MICRODRIVE  
 COMPATIBLE. Does any other copier come  
 near?

LOOK at only SOME of its options:

- Macrocopy makes working copies of the full 16K or 48K
- Verifies. Repeat copies. Automatic about 300PS programs
- Loads CONTINUOUSLY (not just one part at a time like most copiers) even without pressing a key
- Copies HEADERLESS and ALL programs that are aware of it
- Very user friendly and simple to use
- LISTS. We are so convinced that you will be pleased with our product that we offer a FULL MONEY BACK GUARANTEE if you are not fully satisfied. Cost only £4.95

## SPECTRUM MENU OPERATING SYSTEM

**MENUSYS** is an operating system a  
 program for running programs. If you write  
 lots of short BASIC programs, **MENUSYS** is  
 for you. Install up to 15 BASIC programs, then  
 control them with 1 easy menu-programmed  
 commands. Pack more action into your 16K  
 or 48K. Write short user friendly programs  
 using **MENUSYS** routines for menu control,  
 home-style data entry and inter-program  
 communication. Teletext 10-10 program  
 becomes snappy and sophisticated. **MENUSYS**  
 includes fully programmable **LOAD/RECALL** (re-  
 turn, return etc) copy back up (save un-  
 finished games in state of play). **MENUSYS**  
 is mostly in BASIC, listable, copyable, and  
 easily variable and comes with 20 pages of  
 instructions. Get **MENUSYS** for Christmas  
 guaranteed to be yours for at least 12 days  
 (it's like getting a new computer!)

**MENUSYS for 16/48K SPECTRUM**  
 only £4.95 inc tape, box, p&p  
 To receive your **MENUSYS** c.s. by return post  
 send cheque/PO for £4.95 to:

Micro Accessories  
 49 Bowling Green Lane

# THERE'S NO PRESENT LIKE THE FUTURE.

## THE WORLD'S FINEST PROGRAMMING TUTORIAL FOR ONLY £12.95.

Thousands who own, or would like to own home computers have yet to experience the feeling of discovery that comes when you write your own programs. Yet learning programming can be easy.

'Learn Basic' from Logic 3 is the ultimate development of the method first devised at Strathclyde University - a straightforward, easily understood tutorial written by Professor Andrew Collin and Veronica Collin, authors of Britain's best-selling tutorial package.

Using the method tested by university students and used successfully by over 200,000 home computer users, 'Learn Basic' runs on your own computer and explains everything in clear non-American English without jargon or computer talk. In a matter of hours, you will be writing programs that work.

Essentially, 'Learn Basic' and the rest of the 'Learn Computing' Series that will follow soon are designed for people who want to keep abreast of the computer age. For people who realise that understanding computers is the key to future success, at school, at work and as a parent.

Make your future, and your family's future, richer this Christmas.

Get 'Learn Basic' by Logic 3 - two tapes and a full-size manual for Spectrum or Dragon (others soon) at just £12.95.

At that price, it's a gift.

Buy the Logic 3 'Learn Computing' Series at computer shops and major retail stores all over Britain. In case of difficulty, write to Logic 3 in Windsor.

To: Logic 3 Ltd, Mountbatten House, Victoria Street, Windsor SL4 1HE.

If you would like to know more about using and programming a computer in your home, send this coupon to your free copy of our 16-page explanatory booklet. (It's things you wanted to know about computers.)

It will help you out with the jargon of computer jargon, and give you news about software developments - even games! [ ]

Please send for our software catalogue (tick either or both) [ ]

# NEW RELEASES

## UP UP AND AWAY

At last a genuinely interesting educational package for the Spectrum — *Ballooning* from Heinemann Educational Books.

The program itself involves piloting a balloon over various hills and mountains, using vents to lower you and the burner to raise you up. At various points in your trip you will be given different tasks to complete like getting and delivering medical supplies.

The manual/booklet not only describes the operation of the game, but is full of puzzles and information about the history of ballooning — all illustrated with photographs and colour drawings.

Other programs in the same series involve driving and being a special agent — your children might actually enjoy this series, maybe even learn something.

**Program** *Ballooning*  
**Price** £9.95

## DREADED BUGS

Lothlorien is well known for its excellent war-gaming simulations, so its latest move is slightly surprising — the company has released a series of arcade games for the Spectrum and Oric 1.

*Micro Mouse* is the Spectrum game and is superb. ■

introduces an idea so obvious you wonder why nobody ever thought of it before. The program is about making a program.

On screen are the lines of a program that won't run because some bugs have stolen some of the letters and numbers in the program. *Micro Mouse* has to retrieve the stolen letters and replace them in their correct positions in the program.

He is hampered in his task by the dreaded bugs which he must avoid at all costs. From time to time *Micro* is given a chance at revenge via a can of *Datakill* which wipes them all out for a while.

Once a program is completed it will run and you are treated to another, more complex, program to debug. The game is graphically excellent with smooth-moving sprites.

**Program** *Micro Mouse*  
**Price** £5.95  
**Micro** Spectrum 16/48K  
**Supplier** M C Lothlorien  
56A Park Lane  
Poynton  
Stockport

## PRICE PROBLEM

One of the things that led to a falling off in the numbers of *Dragon 32s* being sold was almost certainly the lack of quality software.

Now that the *Dragon* has been given a new lease of life by various injections of cash, *Dragon Data* are obviously keen to ensure that history does not repeat itself. To this end, it has just issued 11 new games — all professionally packaged in what look like large video cases.

*Whirlybird Run* is a *Scramble* style game in which you pilot a helicopter over mountains and hills and past missile defences.

Later levels include swarms of alien fighters trying to knock you out of the sky. Like the original, you must replenish your fuel supply by bombing the enemy fuel dumps (why this should work is a mystery to me).

The game is graphically good, with the helicopter's rotors seeming to turn, and is also fast and addictive. Up to this point, then, I would recommend the game. The problem is the price — £12.95 really isn't justified even with the big box and two page manual. A Spectrum equivalent would cost more like £6.

**Program** *Whirlybird Run*  
**Price** £12.95  
**Micro** *Dragon 32*  
**Supplier** *Dragon Data*  
Kenfig Industrial Estate  
Margam  
Port Talbot  
West Glamorgan

## HELPFUL CLUES

*Twin Kingdom Valley* is an illustrated adventure game for the Acorn machines and the Commodore.

Like the *Hobbit*, it is basically a text style adventure, but with every scene illustrated. In this case there are 175 different illustrations — some of which may contain helpful clues so they are more than just dressing.

Judging by the screen shots the graphics are well up to *Hobbit* standard and in other ways the games are comparable — both, for example, feature the passage of time as an important ingredient. Both can manage quite complicated instructions and, more generally, their worlds are similar — full of dragons and caves, treasures and forests.

*Bug-Byte* doesn't seem worried by its illustrious competition (now that *Hobbit* is on BBC and 64) though. At the bottom of the advertisements is the legend 'Eat your heart out Bilbo!' — whether he will remain to be seen.

**Program** *Twin Kingdom Valley*

**Price** £9.50  
**Micro** BBC/Electron/CMB 64  
**Supplier** Bug-Byte  
Mulberry House  
Canning Place  
Liverpool

## FILM SET

*Zodiac* was the first of the *Oric* adventures to achieve anything like the cult status of the *Artic* adventures. So, there will be quite a lot of interest in the follow-up *House of Death*.

Although basically a text adventure in the classic mould, there are various puzzles and intelligence tests built into it.

The setting is a disused film set, the location for such classic horror films as *An American Werewolf in Guernsey*. The task is to find five treasures and return them to the starting place.

Aside from logical puzzles, problems can also take the form of monsters from the movies like werewolves, Dracula, etc.

**Program** *Oric House of Death*  
**Price** £9.99  
**Micro** *Oric 1*  
**Supplier** Tansoft  
Units 1 and 2  
Techo Park  
Newmarket Road  
Cambridge

## PURE FANTASY

For those of you who, like me, had their imagination fired by the sequence in *2001* when the space ship slowly docks with the space station to the music of the Blue Danube, a new program may help you live out your fantasy to the full.

2002 is a sophisticated simulation of the famous docking sequence, with you at the controls of the Orion spacecraft.

The high resolution of the BBC, coupled with superb 3D gives a spellbinding effect. There are six skill levels for everyone from the complete novice to the experienced astro pilot.

**Program** 2002  
**Price** £7.95  
**Micro** BBC B  
**Supplier** Superior Software  
Dept C  
69 Leeds Road  
Bramhope  
Leeds

## SLIDER TOY

*Jumbly* is here. Quite a few people wondered what those teasing adverts saying 'Jumbly is coming' were all about. Now we know.

*Jumbly* is a computer version of those slider toys in which you have to move around various plastic tiles to make a picture.

However, what used to be a couple of hours entertainment has been extended to a couple of months worth, by a number of special features. Most importantly, there are a series of pictures — what number has not been given away.

Some of the pictures scroll in different directions, making it much harder to see what you are doing. Each picture also has a target number of moves in which it must be solved — only if you equal or beat this will you be allowed to go to the next one.

It is absolutely infuriating and my reaction was to throw something at the tv — others

will doubtless get days of masochistic pleasure.

**Program** *Jumbly*  
**Price** £6.95  
**Micro** Spectrum 48K  
**Supplier** Ktronics  
Unit 2  
Shire Hill Industrial Est  
Salfron Walden  
Essex CB11 3AX

## ARCADE HIT

Every so often, seemingly by some sort of Jungian telepathy, all the software houses decide to bring out home micro versions of an arcade hit at exactly the same time.

This month it is the bizarre game *Qbert*. This involves bouncing a funny little creature up and down a stack of cubes trying to land on each one. This is made more difficult by the presence of various similarly bouncing missiles that tumble down the stack.

There are any number of versions of the game for any number of machines (although I have not yet seen one for Spectrum).

One of the best is *Humphrey* which is true to the arcade original in every way except that the layout of the cubes changes with each screen of action. It runs on the Commodore 64 and is graphically excellent.

**Program** *Humphrey*  
**Price** £6.90  
**Micro** Commodore 64  
**Supplier** Mr Micro  
69 Parlington Lane  
Swinton  
Manchester M27 3AL

## ABOVE STANDARD

If only it had the software back up the Texas TI99/4A would look excellent value for £90. Doubtless it's now far too late for this situation to change dramatically, but there are some interesting new programs around.

*Adventuremania* is a graphics adventure which uses all 16K and all colour sets. It's set in London — your first location is Trafalgar Square. The sleeve notes contain the dark warning 'beware the ungodly are everywhere', pre-

sumably this means the tourists.

The game is supposed to be fiendishly difficult — you don't even find out where you are going and what you are supposed to do until you find the hidden instructions half way through the adventure. The game looks above the usual Texas standard without being the usual high Texas price.

**Program** *Adventuremania*  
**Price** £5.95  
**Micro** Texas Instruments  
994A  
**Supplier** Intrigue Software  
Crabbrook Road  
Tenterden  
Kent TN30 6UJ

## VISUAL MENU

There's no doubt about it. The Commodore 64 has great sound — if there's a single reason to switch from a Spectrum, that's it.

The problem is the effects are not very easy to get at — around five Pokes per noise. If only someone could make it simpler.

They have (aren't market forces wonderful) and *Ultisynth 64* is the result. The program enables you to use your Commodore 64 as a synthesiser, record your creations and play them back.

What the program does, essentially, is enable you to control the various parameters of each sound using a visual menu — for the note values you can use the keyboard, playing it like a piano.

What the program proves once again is that the Commodore 64 is a wonderful machine (some of the sounds are really impressive) but one

that Commodore have documented very badly indeed — hence the place for programs like this. The manual that comes with the program is excellent.

**Program** *Ultisynth 64*  
**Price** £14.95  
**Micro** Commodore 64  
**Supplier** Quicksilver  
Palmerston Park House  
13 Palmerston Road  
Southampton  
Hampshire  
SO1 1LL

## LOST TOMB

*Aztec Tomb* is a graphic adventure for the Commodore 64 from Alligata Software. It's vast, taking 15 minutes to load, so it should see you all through Christmas.

Your task is to locate a lost Aztec tomb, hidden deep within the Amazon rain forest. Each location in the jungle is illustrated by a picture like the Hobbit.

The cover blurb warns you that this is no ordinary jungle, strange things can and will happen. The scope of the program and quality of the graphics should ensure that this one does well.

**Program** *Aztec Tomb*  
**Price** £7.95  
**Micro** Commodore 64  
**Supplier** Alligata Software  
178 West Street  
Sheffield S1 4ET

New Releases is designed to let people know what software is coming on to the market. If you have a new game or utility which you are about to release send a copy and accompanying details to: New Releases, Popular Computing Weekly, 12-13 Little Newport Street, London WC2R 3LD

## Book Ends

### PROPER BASIC

An excellent book for those who believe in doing things properly even if that means paying more is *Proper Basic* by Brian C Walsh.

Although clearly written and full of diagrams, the book looks as though it is primarily intended for schools and colleges. It contains more or less everything you could ever need to know about Basic in all its forms.

The book would be a good reference work for questions about the theoretical nature of Basic, but make sure it's really what you need — it costs £12.50.

**Book** *Proper Basic*  
**Price** £12.50  
**Micro** General  
**Supplier** John Wiley  
Baffins Lane  
Chichester  
West Sussex  
England PO19 1UD

Not, I should stress, that there is anything very gory or nail-biting about any of the stories. They're all about solving science projects and finding out how many marbles are in a jar.

**Book** *Bytes Brothers Input an Investigation*  
**Price** £1.25  
**Micro** General  
**Supplier** Fontana Paperbacks  
8 Grafton Street  
London W1X 3LA

### EDUCATION

More than anything else the BBC computer is associated with education — both of children and adults.

*BBC Micro in Education* is a book aimed squarely at this market and is intended to be used by teachers within classwork as well as in homes.

The book is a mixture of general information about the history and development of computers as well as specific instruction on BBC Basic.

**Book** *BBC Micro in Education*  
**Price** £6.50  
**Micro** BBC  
**Supplier** Shiva Publishing  
4 Church Lane  
Nantwich  
Cheshire CW5 5RQ

### MYSTERY

A nice idea for the younger computer owner. The *Bytes Brothers Input an Investigation* is a book in which fiction is interlaced with computer programs. The Bytes Brothers use the programs to help solve their mysteries.

**Ut** 1 BBC 11  
**Wheels** Arc Spectrum £5.95 Gem  
£5.95 Microsphere

This Week is a new section that covers all the new software coming on to the home micro market each week. All suppliers should send details of their new programs to: This Week, Popular Computing Weekly, 12-13 Little Newport Street, London WC2R 3LD.

## Ziggurat

### Structured Pascal

Last week I examined some of the features of Fort, picking out those I think should appear in our ideal language. This week, I look at Pascal in the same way.

The most notable feature of Pascal is that it is structured. Effectively, this means that it discourages you from using Goto statements by providing Repeat, While and Case statements. Some beginners feel that structured programming is not beneficial, but I must stick my neck out and say that faster, better programs will be written if you use structured techniques.

Amateur programmers or beginners find Goto easier to use, but our ideal language is not aimed at either group. Beginners are well served by Basic, Pascal and Logo, whilst amateur programmers who persist in ignoring structured programming are doing themselves a disservice.

Thus, our ideal language will use the three basic structures of Pascal. Other elements of the structured nature of Pascal are the procedures and functions. I covered these in my last column, drawing the conclusion that not only should one be able to define procedures and functions, but also operators.

In addition, Pascal offers user defined data types. These are a great idea on the whole, but they lead in the odd Pascal situation where types cannot be mixed — eg.  $A := 2+2.0$  causes a crash on most systems. I suggest user defined types should be implemented, with automatic type conversion where feasible.

One of the most important features of Pascal, and its siblings such as Algol and BCPL, is the block structure. This allows you to treat a group of statements as a single statement, if they are bracketed by special words or symbols. This is

admirable, since it makes the language easy to compile and interpret, but is difficult for beginners to learn. However, one has to draw the distinction between easy to learn and easy to use. Block structuring is a tricky concept for some people, but once grasped, it is elegant and simple to use.

The feature of Pascal that seems to annoy people most is the use of the  $:=$  symbol to indicate an assignment statement. I am inclined to make the colon optional, on the understanding that many people do not find it necessary, especially those reared on Basic.

A major disadvantage of Pascal is that it is rarely interpreted. As I said before, our language must be both interpreted and compiled, to allow easy program development and both speed and security from the compiler.

This leads to several problems. For example, BBC Basic provides the Eval function to evaluate an expression. This is very useful in graph plotting applications, but it is impossible to compile. For example, consider the fragment:

```
D=23
D=AS"D*2"
PRINT EVAL(AS)
```

When this is compiled, the computer will no longer know the variables D and AS by name, only by their address. Thus, it will not be able to compile the previous routine.

The name of each variable could be stored in the compiled program, but it would add considerably to the space it takes up. A more pertinent objection is that the compiled code will need access to a complete expression evaluator, which forms a substantial part of the interpreter itself. Thus, the compiled code would swell to enormous proportions if Eval was used.

So, I maintain that certain functions are impossible to compile. This leads to an interesting question — should we provide these functions in the interpreter, but not in the compiler? If we do, there will be incompatibilities between the two, which is ugly. So, do you attach more value to compatibility or to features? Personally, I am tempted not to provide such functions at all, but there is room for debate on the subject.

Finally, some people have asked whether this series is building up to naming a specific language as the mythical ideal. I shall not divulge the answer yet — but it would be nice to find our ideal language existed.

Jeremy Ruston

## Puzzle

### Forty thieves

#### Puzzle No 86

Once upon a time, many years ago, not far from old Baghdad, lived Ali Baba and his 40 thieves.

In their secret cave they examined the spoils of their latest robbery — a fortune in emeralds. The precious stones were laid out on the cave floor in the form of a triangular pattern similar to the one shown here:

As there were more jewels than is shown, the triangle was much larger than this, but its general arrangement was as illustrated, with every row being complete.

The next day, when Ali Baba awoke, he found to his horror that the 40 thieves had departed taking with them all but one of the jewels. They had divided up the jewels equally amongst them and, as they had one left over, they left it for poor Ali Baba.

What was the smallest number of gems that could have been present?

#### Solution to Puzzle No 81

The program generates integer squares, Z, and tests to see if each is made up of two integer squares,  $A \times A$  and  $B \times B$ .

```
10 LET X = 720 LET P = 130 LET Q = 140 LET Z =
X*X 50 FOR A = 1 TO X-1 60 IF A*A >= P*10
THEN LET P = P*10 70 FOR B = 1 TO X-1 80 IF
B*B >= Q*10 THEN LET Q = Q*10 90 IF (Z -
B*B)/Q = A*A/10 OR (Z - A*A)/P = B*B/10
THEN PRINT "A*A="A*A,"B*B="B*B,"Z="Z
GOTO 20
Z 100 NEXT B 110 NEXT A 120 LET X = X + 1 130
GOTO 20
```

This gives an answer of 3249 ( $57^2$ ) made up of 324 ( $18^2$ ) and 9 ( $3^2$ ).

#### Winner of Puzzle No 81

The winner is: G Murray, Honeyborough, Neyland, Dyfed, who receives £10.
